Dynamic of Soil in Ground-Borne Vibration Mitigation Mehran Naghizadeh,2024-05-29 In the heart of big cities a less obvious challenge exists right under our feet The everyday activities of city life like traffic construction and industrial work do more than just create noise They send vibrations through the ground which can be problematic sometimes even destabilizing buildings and affecting the people who live there This modern issue needs a modern solution This book introduces the concept of trenches filled with a material called geofom an innovative method to control these ground vibrations Mehran Naghizadeh delves into a detailed study to see how placing these trenches in specific locations can help protect against these vibrations The book walks through various automated 2D and 3D models demonstrating how the trenches can be effectively used to protect areas close to and far from the source of vibrations The study goes beyond just explaining what these trenches are and how they work It looks into the reasons behind their design examining different trench shapes and how each shape helps in managing these underground vibrations The challenge is more complex than it seems The ground we walk on is not just a single layer but has different layers with various properties This book takes you on a journey to understand how these layers influence the effectiveness of our vibration warriors It s an exploration of how every layer in the soil contributes to managing vibrations

Iterative-Interpolation Super-Resolution Image Reconstruction Vivek Bannore, 2009-03-21 To my wife Mitu Vivek Bannore Preface Preface In many imaging systems under sampling and aliasing occurs frequently leading to degradation of image quality Due to the limited number of sensors available on the digital cameras the quality of images captured is also limited Factors such as optical or atmospheric blur and sensor noise can also contribute further to the degradation of image quality Super Resolution is an image reconstruction technique that enhances a sequence of low resolution images or video frames by increasing the spatial resolution of the images Each of these low resolution images contain only incomplete scene information and are geometrically warped aliased and under sampled Super resolution technique intelligently fuses the incomplete scene information from several consecutive low resolution frames to reconstruct a high resolution representation of the original scene In the last decade with the advent of new technologies in both civil and military domain more computer vision applications are being developed with a demand for high quality high resolution images In fact the demand for high resolution images is exponentially increasing and the camera manufacturing technology is unable to cope up due to cost efficiency and other practical reasons

Grouping Multidimensional Data Jacob Kogan, Charles Nicholas, Marc Teboulle, 2006-02-08 Clustering is one of the most fundamental and essential data analysis techniques Clustering can be used as an independent data mining task to discern intrinsic characteristics of data or as a preprocessing step with the clustering results then used for classification correlation analysis or anomaly detection Kogan and his co editors have put together recent advances in clustering large and high dimension data Their volume addresses new topics and methods which are central to modern data analysis with particular emphasis on linear algebra tools optimization methods and statistical techniques The contributions written by leading researchers from both academia and industry cover theoretical basics as well as application and evaluation of algorithms and thus provide an excellent state of the art overview The level of detail the breadth of coverage and the comprehensive bibliography make this book a perfect fit for researchers and graduate students in data mining and in many other important related application areas
