information for Targets GIFT code is a FORTRAN language code used to mathematically describe the geometry of a three
dimensional vehicle such as a tank truck or helicopter The geometric data generated by the GIFT code is merged in
vulnerability computer codes with the energy effects data of a selected munition to simulate the probabilities of malfunction
or destruction of components when it is attacked by the selected munition To simulate the geometry of a vehicle the GIFT
code uses combinatorial geometry COM GEOM data The COM GEOM data consists of three tables a Solid Table a Region
Table and a Region Identification Table The GIFT code contains numerous tests and checks to ensure that COM GEOM data
listed in these three tables is correct The GIFT code options include those which graphically display the vehicle those which
check the correctness of the geometry data those which compute physical characteristics of the vehicle and those which
generate the geometric data used by vulnerability codes The user manual describes the tests made on the COM GEOM data
the output options and the output generated by the GIFT code *Manual of General Service Code* United States. Army.
