Changing Times Martin Chick, 2020 A study of the main changes in the British economy from 1951 focussing on nationalisation and privatisation unemployment funding of the NHS and education deindustrialisation and Britain's changing industrial structure taxation inequality environmental change and policy and the UK's changing relationship with the EEC and the European Union **The Engineer**, 2016 **Management of the Defense Industrial Base** United States. Congress. House. Committee on Government Operations. Legislation and National Security Subcommittee, 1989 **The Code** Margaret O'Mara, 2019-07-09 One of New York Magazine's best books on Silicon Valley The true behind the scenes history of the people who built Silicon Valley and shaped Big Tech in America Long before Margaret O'Mara became one of our most consequential historians of the American led digital revolution she worked in the White House of Bill Clinton and Al Gore in the earliest days of the commercial Internet There she saw firsthand how deeply intertwined Silicon Valley was with the federal government and always had been and how shallow the common understanding of the secrets of the Valley's success actually was Now after almost five years of pioneering research O'Mara has produced the definitive history of Silicon Valley for our time the story of mavericks and visionaries but also of powerful institutions creating the framework for

innovation from the Pentagon to Stanford University It is also a story of a community that started off remarkably homogeneous and tight knit and stayed that way and whose belief in its own mythology has deepened into a collective hubris that has led to astonishing triumphs as well as devastating second order effects Deploying a wonderfully rich and diverse cast of protagonists from the justly famous to the unjustly obscure across four generations of explosive growth in the Valley from the forties to the present O Mara has wrestled one of the most fateful developments in modern American history into magnificent narrative form She is on the ground with all of the key tech companies chronicling the evolution in their offerings through each successive era and she has a profound fingertip feel for the politics of the sector and its relation to the larger cultural narrative about tech as it has evolved over the years Perhaps most impressive O Mara has penetrated the inner kingdom of tech venture capital firms the insular and still remarkably old boy world that became the cockpit of American capitalism and the crucible for bringing technological innovation to market or not The transformation of big tech into the engine room of the American economy and the nexus of so many of our hopes and dreams and increasingly our nightmares can be understood in Margaret O Mara s masterful hands as the story of one California valley As her majestic history makes clear its fate is the fate of us all

The Donbas Conflict in Ukraine Daria Platonova, 2021-09-28

This book examines why when the conflict in eastern Ukraine began in 2014 fighting broke out in the Donetsk region whereas it did not in Kharkiv city despite the city like the Donetsk region being geographically proximate to Russia and similar in ethnic and linguistic make up. Based on extensive original research the book argues that a key factor was the nature and behaviour of local elites with those in Kharkiv having diffuse ties to the centre and therefore being more capable of adapting to sudden profound regime change at the centre whereas the elites in the Donetsk region had much more concentrated ties to the centre were dependent on one network and therefore were much less able to cope with change. The book thereby demonstrates how crucial for Ukraine are patronal politics patronage networks and informal centre region relations and that it was these local political circumstances rather than Russia which brought about the conflict.

Ransomware Evolution Mohiuddin Ahmed, 2024-12-23 Ransomware is a type of malicious software that prevents victims from accessing their computers and the information they have stored. Typically victims are required to pay a ransom usually using cryptocurrency such as Bitcoin to regain access. Ransomware attacks pose a significant threat to national security and there has been a substantial increase in such attacks in the post Covid era. In response to these threats large enterprises have begun implementing better cybersecurity practices such as deploying data loss prevention mechanisms and improving backup strategies. However cybercriminals have developed a hybrid variant called Ransomware 2.0. In this variation sensitive data is stolen before being encrypted allowing cybercriminals to publicly release the information if the ransom is not paid. Cybercriminals also take advantage of cryptocurrency's anonymity and untraceability. Ransomware 3.0 is an emerging threat in which cybercriminals target critical infrastructures and tamper with the data stored on computing devices. Unlike in traditional ransomware attacks cybercriminals are more interested in the actual data on the victims' devices particularly from critical enterprises such as government healthcare education defense and utility providers. State based cyber actors are more interested in disrupting critical infrastructures rather than seeking financial benefits via cryptocurrency. Additionally these sophisticated cyber actors are also interested in obtaining trade secrets and gathering confidential information. It is worth noting that the misinformation caused by ransomware attacks can severely impact critical infrastructures and can serve as a primary weapon in information warfare in today's age. In recent events Russia's invasion of Ukraine led to several countries retaliating against Russia. A ransomware group threatened cyber attacks on the critical infrastructure of these countries. Experts warned that this could be the most widespread ransomware gang globally and is linked to a trend of Russian hackers supporting the Kremlin's ideology. Ensuring cyber safety from ransomware attacks has become a national security priority for many nations across the world. The evolving variants of ransomware attacks present a wider and more challenging threat landscape highlighting the need for collaborative work throughout the entire cyber ecosystem value chain. In response to this evolving threat a book addressing the challenges associated with ransomware is very timely. This book aims to provide a comprehensive overview of the evolution trends techniques impact on critical infrastructures and national security.

China and the Geopolitics of Rare Earths Sophia Kalantzakos, 2018 Rare earths are elements that are found in the Earth's crust and are vital ingredients for the production of a wide variety of high tech defense and green technologies everything from iPhones and medical technologies to wind turbines efficiency lighting smart bombs and submarines While they are not particularly rare in availability they are difficult and expensive to mine Yet China has managed to gain control over an estimated 97 percent of the rare earth industry since the 1990s through cheap production high export taxes and artificial limitations of supply Rare earths and China's monopoly over them became international news after China unofficially curtailed exports to Japan the United States and Europe in 2010 This embargo followed a collision between Chinese and Japanese boats in the East China Sea a locus of geopolitical and economic tension between the two countries Although the World Trade Organization forced China to scrap its restrictions it still holds a stranglehold over these elements that are so critical to the economic and security interests of the United States and its allies In this book Sophia Kalantzakos argues that the 2010 rare earth crisis signaled more than just a trade dispute Rather it raises questions about China's use of economic statecraft and must be regarded as a part of the larger discourse of global power relations Importantly she also argues that the failure of political actors in major industrial nations to enact comprehensive and effective policy solutions or the scientific and business communities to devise sustainable rare earth production outside of China points to future resource competition Focusing on China's monopoly over the rare earth industry **China and the Geopolitics of Rare Earths** examines the impacts of growing worldwide resource competition and the complexities policymakers face as they develop strategies and responses in an increasingly globalized world
