William Sims Bainbridge,2011-09-06 The newest communication technologies are profoundly changing the world s politics economies and cultures but the specific implications of online game worlds remain mysterious The Virtual Future employs theories and methods from social science to explore nine very different virtual futures The Matrix Online Tabula Rasa Anarchy Online Entropia Universe Star Trek Online EVE Online Star Wars Galaxies World of Warcraft Burning Crusade and The Chronicles of Riddick Each presents a different picture of how technology and society could evolve in coming centuries but one theme runs through all of them the attempt to escape the Earth and seek new destinies among the stars Four decades after the last trip to the moon a new conception of spaceflight is emerging Rather than rockets shooting humans across vast physical distances to sterile rocks that lack the resources to sustain life perhaps robot space probes and orbiting telescopes will glean information about the universe that humans can then experience inside computer generated environments much closer to home All nine of these fantastically rich multiplayer masterpieces have shown myriads of people that really radical alternatives to contemporary society could exist and has served as a laboratory for examining the consequences Each is a prototype of new social forms a utopian subculture and a simulation of technologies that have yet to be invented They draw upon several different traditions of science fiction and academic philosophy and they were created in several nations By comparing these nine role playing fantasies we can better consider what kind of world we want to inhabit in the real future *A Wake-Up Call for Wisdom* Bill Hussey,2009-06-15 This book is a collection of Societal Insanities that could be described as idiotic systems customs and practices accepted mythologies and conventional wisdom governmental and business vices stemming from massive egos and out of control greed plus stupidity hypocrisy unethical behavior and declining integrity everywhere The chapters are seasoned with occasional humor profanities and some would say obscenities But thats not true according to the author see Chapter Thirty One This book could be considered tame compared to books by George Carlin the brilliant philosopher comedian however his fans would probably like it At the end of each chapter where it is appropriate the old sage that is the authors role in this book provides a SAGE SOLUTION to the problem a concept for change that could possibly lead to a workable plan It would require experts in all aspects of the problem to work together in a spirit of cooperation using their experience intelligence and WISDOM Yes thats a tall order but something must be done to put this country back on the right track And the people in Washington who are supposed to be solving our domestic and international problems should sit down together put their political doctrines aside quit trying to win their stupid partisan war and concentrate on saving this country Thirty four of the thirty eight chapters in this book are about different societal insanities so you could start with the Foreword and read straight through or you could look at the Table Of Contents select a chapter with subject matter that interests you and read the complete book in the order you prefer However for better understanding of any chapter be sure to read the Foreword and Chapter One before reading other chapters *Destined for*

the Stars Catherine L. Newell, 2019-06-05 Where did humanity get the idea that outer space is a frontier waiting to be explored *Destined for the Stars* unravels the popularization of the science of space exploration in America between 1944 and 1955 arguing that the success of the US space program was due not to technological or economic superiority but was sustained by a culture that had long believed it was called by God to settle new frontiers and prepare for the inevitable end of time and God's final judgment Religious forces Newell finds were in no small way responsible for the crescendo of support for and interest in space exploration in the early 1950s well before Project Mercury the United States first human spaceflight program began in 1959 In this remarkable history Newell explores the connection between the art of Chesley Bonestell the father of modern space art whose paintings drew inspiration from depictions of the American West and the popularity of that art in Cold War America Bonestell's working partnership with science writer and rocket expert Willy Ley and Ley and Bonestell's relationship with Wernher von Braun father of both the V 2 missile and the Saturn V rocket whose millennial conviction that God wanted humankind to leave Earth and explore other planets animated his life's work Together they inspired a technological and scientific faith that awoke a deep seated belief in a sense of divine destiny to reach the heavens The origins of their quest Newell concludes had less to do with the Cold War strife commonly associated with the space race and everything to do with the religious culture that contributed to the invention of space as the final frontier

Boston, Damien Broderick, 2013-02-13 *Building New Worlds* is a history of a pivotal decades long episode in the birth and growth of today's science fiction Enthralling and amusing it's written with affection and wit This is no dry modishly theorized academic analysis Nor is it a rah rah celebration of the Good Old Days Here is a candid and astute reader's response to a magazine that by today's standards was often comically bad but was also immensely important in its time and improved like the Little Engine or maybe Starship That Could *New Worlds* is best remembered today as the fountainhead of the New Wave of audacious experimental SF in the second half of the 1960s under editor Michael Moorcock But these first pioneering issues from 1946-59 were edited by the magazine's founder John Ted Carnell 1912-72 Carnell was a pillar of the old style UK SF establishment but gamely supportive of innovators most famously of the brilliant J G Ballard Brian W Aldiss and John Brunner whose early work he nurtured The story of how *New Worlds* got started survived and got better is essential to the history of the genres of the fantastic in the UK and indeed the world And huge fun to read Watch for the companion volumes *New Worlds Before the New Wave* and *Strange Highways* dealing with *New World's* companion magazine *Science Fantasy*
