

INTRODUCTION

Inkjet printing is a mature technique for ~~colourful~~ colorful graphic arts. It ~~exels-~~ excels at customized, large-area, high-resolution, and small-volume production. With the developments in conductive, dielectric, and even semi-conducting inks, there is potential for large area ~~ink jet-inkjet~~ electronics fabrication. Passive radio frequency devices can benefit greatly from a printing process, seeing as the size of ~~those~~ these devices is defined by the frequency of operation. The large size of radio frequency passives means that they either take up expensive space "on chip", or ~~they~~ are fabricated on a ~~seperate-separate~~ lower cost ~~substrate-substrate~~ and ~~some-how-somehow~~ bonded to the chips. This has hindered cost-sensitive high volume ~~A~~ applications such as radio frequency identification tags. While ~~many-much~~ work has been undertaken on inkjet-printed ~~conductors-conductors~~ for passive ~~antennaes-antennas~~ on microwave substrates and even paper, little work has been done on the printing of the dielectric materials aimed at radio frequency passives.

Both the conductor and dielectric ~~needs~~ to be integrated to create a multilayer inkjet printing process that is capable of making quality passives ~~like-such as~~ capacitors and inductors. Three inkjet-printed dielectrics are investigate in this thesis: a ceramic (alumina), a thermal-cured polymer (-poly 4 vinyl phenol), and a UV-cured polymer (acrylic based). Both a silver nanoparticle ink ~~as-well-as-and~~ a custom in-house formulated particle-free silver ink ~~are-was~~ explored for the conductor. The focus is ~~in-on~~ passives, mainly capacitors and inductors. Comparing to low frequency electronics, radio frequency components have additionally sensitivity with regarding to skin depth of the conductor and surface roughness, as well as dielectric constant and loss tangent ~~from-of~~ the dielectric. ~~Those-These~~ concerns are investigated with the aim ~~at-of~~ making the highest quality components possible and ~~to~~ understanding the current limitations of inkjet-fabricated radio frequency devices.
