- 1. Create a table of at least four values for the function that includes two points of intersection between the airplane and rainbow.**

X	Y
0	44
2	32
4	20
6	8

- 2. Answer the following questions in complete sentences.**

- What is the domain and range of the rainbow? Explain what the domain and range represent. Do all of the values make sense in this situation? Why or why not?**

The domain of the rainbow is $(-6, 6)$. It represents the set of values that we can plug in. The range of the rainbow is $(0, 36)$. This represents the set of values that the function assumes. Yes, the values do make sense since -6 and 6 have a max of 36 which is the highest output here.

- What are the x and y intercepts of the rainbow and explain what they represent.**

The x intercept is at $(-6, 6)$. This represents the two points where the rainbow ends. The y intercept is at $(0, 36)$. This represents how high the rainbow would go.

- Is the linear function you created with your table positive or negative? Explain.**

5 Introduction to Algebra: Grade 6 Workbook Maria Miller,2016-10-19 In Introduction to Algebra Grade 6 Workbook we
concentrate on two important concepts expressions and equations We also touch on inequalities and graphing on a very
introductory level In order to make the learning of these concepts easier the expressions and equations in this workbook do
not involve negative numbers as they typically do when studied in pre algebra and algebra We start out by learning some
basic vocabulary used to describe mathematical expressions verbally terms such as the sum the difference the product the
quotient and the quantity Next we study the order of operations once again A lot of this lesson is review The lesson
Multiplying and Dividing in Parts is also partially review and leads up to the lesson on distributive property that follows later
Then we get into studying expressions in definite terms students encounter the exact definition of an expression a variable
and a formula and practice writing expressions in many different ways The concepts of equivalent expressions and
simplifying expressions are important If you can simplify an expression in some way the new expression you get is equivalent
to the first We study these ideas first using lengths it is a concrete example and hopefully easy to grasp In the lesson More
On Writing and Simplifying Expressions students encounter more terminology term coefficient and constant In exercise 3
they write an expression for the perimeter of some shapes in two ways This exercise is once again preparing them to
understand the distributive property Next students write and simplify expressions for the area of rectangles and rectangular
shapes Then we study the distributive property concentrating on the symbolic aspect and tying it in with area models The
next topic is equations Students learn some basics such as the solutions of an equation are the values of the variables that
make the equation true They use properties of operations and the idea of maintaining the equality of both sides of an
equation to solve simple one step equations I have also included a few two step equations as an optional topic Lastly in this
workbook students get to solve and graph simple inequalities and study the usage of two variables and graphing Grade 6
