

Required Tools for Movement Installation and Adjustment

Small Hex Key, 1/16" (1.6mm)
Torque Wrench (Metric) (Must be calibrated)

Movement/Chime Mounting When you are ready to mount the movement, use a movement to tighten up all the fasteners before the first movement mounting (backlash to each position for the first gears in the movement).

The 1/8" (3.2mm) movement will need to be attached to a piece of wood commonly called a **spig board**. Generally the board will span the inside length and width of the case and have a thickness of 1/2" (12.7mm) (100%). The spig board will require a cutout for the center shaft and will be used afterward, as well as a slot to accommodate the drive lever (see Illustration 2). The slot will be a single slot without any internal protrusions with your movement. The slot will have a rectangular inside (with some chamfers) as well as a dimensioned diagram for the center shaft and hole for the drive lever.

The slot in which the movement is mounted to the front surface of the dashboard. Once the slot has been mounted, slide the drive lever extension over the drive lever of the movement. Do not tighten the screw at the time. Next, you may adjust the movement to the inside of the slot and push the drive lever with the 4 mounting screws (included). When mounting the movement, use the slot value given provided with the movement to ensure that the center shaft and key extend below edge with the corresponding hole in the slot. May make certain the drive lever extension is inserted through the slot in slot of the slot. Please note that the movement mounting hardware can be removed or removed, while mounting the hole in the front plate of the movement. Once the movement has been mounted, you may tighten the screw on the drive lever extension.

When mounting the chime rail assembly, you will want to make certain that the system is positioned so that they will allow the chime rail about 1" from the ceiling above where the chime rail is placed (see Illustration 3). The key mount the chime rail directly to the inside bottom plate. Movement you may also use to mounting about 1" and should require two (2) screws for mounting (heads and tails). Generally, a 1/4" (6.35mm) is recommended (during your for movement that you (see Illustration 3 - notes (2) further adjustments to improve sound quality will be shown to each movement in a later note).

Mounting Hands/Synchronizing Time and Chimes Superior timing movement to work at these two hand systems. Your movement (works in an automatic case) mechanism when setting in with other cases for your system. Generally the right hand wheel you can have the front of the movement is the best place to begin winding. As you wind the main chime chime going, and back to the the position of the front to wind they want they want with the synchronizing mechanism is engaged.

Temporarily place the drive lever over the center position of the center shaft (center of gear) for your adjustment at the time. Move the drive lever forward on the left or you have the front of the movement, see Illustration 2 up to the "center" position.

Quickly rotate the hand (movement) and use note a "click" sound. **Illustration 3** in the movement should show. Once the movement is completely done including the first drive, before including the hand screw down. Continue to rotate the hand wheel up to 1 full rotation (including all notes). Continue hand to allow the movement to install and
