conducted is highly beneficial it saves lives and prevents injuries But on the other it can damage public life Why has this come about and does it have to be like that The authors examine the origins of the problem look critically at the tools used by safety assessors and their underlying assumptions and consider important differences between public life and industry where the approaches largely originated They illuminate the whole with an analysis of legal requirements attitudes of stakeholders and recent research on risk perception and decision making The result is a profound and important analysis of risk and safety culture and a framework for managing public safety more effectively
