Redbooks,2015-05-26 Together big data and analytics have tremendous potential to improve the way we use precious resources to provide more personalized services and to protect ourselves from unexpected and ill intentioned activities To fully use big data and analytics an organization needs a system of insight This is an ecosystem where individuals can locate and access data and build visualizations and new analytical models that can be deployed into the IT systems to improve the operations of the organization The data that is most valuable for analytics is also valuable in its own right and typically contains personal and private information about key people in the organization such as customers employees and suppliers Although universal access to data is desirable safeguards are necessary to protect people s privacy prevent data leakage and detect suspicious activity The data reservoir is a reference architecture that balances the desire for easy access to data with information governance and security The data reservoir reference architecture describes the technical capabilities necessary for a system of insight while being independent of specific technologies Being technology independent is important because most organizations already have investments in data platforms that they want to incorporate in their solution In addition technology is continually improving and the choice of technology is often dictated by the volume variety and velocity of the data being managed A system of insight needs more than technology to succeed The data reservoir reference architecture includes description of governance and management processes and definitions to ensure the human and business systems around the technology support a collaborative self service and safe environment for data use The data reservoir reference architecture was first introduced in Governing and Managing Big Data for Analytics and Decision Makers REDP 5120 which is available at <http://www.redbooks.ibm.com/redpieces/abstracts/redp5120.html> This IBM Redbooks publication **Designing and Operating a Data Reservoir** builds on that material to provide more detail on the capabilities and internal workings of a data reservoir **Flexible Decision Automation for Your ZEnterprise with Business Rules and Events** Fiona
