Java Source Code Text Mining:

Text Mining Taeho Jo, 2018-06-07 This book discusses text mining and different ways this type of data mining can be used to find implicit knowledge from text collections The author provides the guidelines for implementing text mining systems in Java as well as concepts and approaches The book starts by providing detailed text preprocessing techniques and then goes on to provide concepts the techniques the implementation and the evaluation of text categorization It then goes into more advanced topics including text summarization text segmentation topic mapping and automatic text management

Text Analysis Pipelines Henning Wachsmuth, 2015-12-02 This monograph proposes a comprehensive and fully automatic approach to designing text analysis pipelines for arbitrary information needs that are optimal in terms of run time efficiency and that robustly mine relevant information from text of any kind Based on state of the art techniques from machine learning and other areas of artificial intelligence novel pipeline construction and execution algorithms are developed and implemented in prototypical software Formal analyses of the algorithms and extensive empirical experiments underline that the proposed approach represents an essential step towards the ad hoc use of text mining in web search and big data analytics Both web search and big data analytics aim to fulfill peoples needs for information in an adhoc manner The information sought for is often hidden in large amounts of natural language text Instead of simply returning links to potentially relevant texts leading search and analytics engines have started to directly mine relevant information from the texts To this end they execute text analysis pipelines that may consist of several complex information extraction and text classification stages Due to practical requirements of efficiency and robustness however the use of text mining has so far been limited to anticipated information needs that can be fulfilled with rather simple manually constructed pipelines

Finding Source Code on the Web for Remix and Reuse Susan Elliott Sim, Rosalva E. Gallardo-Valencia, 2013-06-04 In recent years searching for source code on the web has become increasingly common among professional software developers and is emerging as an area of academic research This volume surveys past research and presents the state of the art in the area of code retrieval on the web This work is concerned with the algorithms systems and tools to allow programmers to search for source code on the web and the empirical studies of these inventions and practices It is a label that we apply to a set of related research from software engineering information retrieval human computer interaction management as well as commercial products The division of code retrieval on the web into snippet remixing and component reuse is driven both by empirical data and analysis of existing search engines and tools Contributors include leading researchers from human computer interaction software engineering programming languages and management Finding Source Code on the Web for Remix and Reuse consists of five parts Part I is titled Programmers and Practices and consists of a retrospective chapter and two empirical studies on how programmers search the web for source code Part II is titled From Data Structures to Infrastructures and covers the creation of ground breaking search engines for code retrieval required ingenuity in the adaptation of existing technology and in the creation of new algorithms and data structures Part III focuses on Reuse Components and Projects which are reused with minimal modification Part IV is on Remix Snippets and Answers which examines how source code from the web can also be used as solutions to problems and answers to questions The book concludes with Part V Looking Ahead that looks at future programming and the legalities of software reuse and remix and the implications of current intellectual property law on the future of software development The story Richie Boss Private Investigator Manager was selected as the winner of a crowdfunded short story contest

Architectures for Adaptive Software Systems Raffaella Mirandola, Ian Gorton, Christine Hofmeister, 2009-06-08 Much of a software architect's life is spent designing software systems to meet a set of quality requirements General software quality attributes include scalability security performance or reliability Quality attribute requirements are part of an application's non functional requirements which capture the many facets of how the functional requirements of an application are achieved Understanding modeling and continually evaluating quality attributes throughout a project lifecycle are all complex engineering tasks which continue to challenge the software engineering scientific community While we search for improved approaches methods formalisms and tools that are usable in practice and can scale to large systems the complexity of the applications that the software industry is challenged to build is ever increasing Thus as a research community there is little opportunity for us to rest on our laurels as our innovations that address new aspects of system complexity must be deployed and validated To this end the 5th International Conference on the Quality of

Software Architectures QoSA 2009 focused on architectures for adaptive software systems Modern software systems must often reconfigure their structure and behavior to respond to continuous changes in requirements and in their execution environment In these settings quality models are helpful at an architectural level to guide systematic model driven software development strategies by evaluating the impact of competing architectural choices Innovations in Communication Networks: Sustainability for Societal and Industrial Impact Vikrant Bhateja,Vazeerudeen Abdul Hameed,Siba K.

Udgata,Ahmad Taher Azar,2025-07-11 This book includes selected papers presented at the 5th International Conference on Data Engineering and Communication Technology ICDECT 2024 held at Asia Pacific University of Technology and Innovation APU Kuala Lumpur Malaysia during 28 29 September 2024 It features advanced multidisciplinary research towards the design of smart computing information systems and electronic systems It also focuses on various innovation paradigms in system knowledge intelligence and sustainability which can be applied to provide viable solutions to diverse problems related to society the environment and industry **Sentimental Analysis and Deep Learning** Subarna Shakya,Valentina Emilia

Balas,Sinchai Kamolphiwong,Ke-Lin Du,2021-10-25 This book gathers selected papers presented at the International Conference on Sentimental Analysis and Deep Learning ICSADL 2021 jointly organized by Tribhuvan University Nepal Prince of Songkla University Thailand and Ejesra during June 18 19 2021 The volume discusses state of the art research works on incorporating artificial intelligence models like deep learning techniques for intelligent sentiment analysis applications Emotions and sentiments are emerging as the most important human factors to understand the prominent user generated semantics and perceptions from the humongous volume of user generated data In this scenario sentiment analysis emerges as a significant breakthrough technology which can automatically analyze the human emotions in the data driven applications Sentiment analysis gains the ability to sense the existing voluminous unstructured data and delivers a real time analysis to efficiently automate the business processes Meanwhile deep learning emerges as the revolutionary paradigm with its extensive data driven representation learning architectures This book discusses all theoretical aspects of sentimental analysis deep learning and related topics **Source Code Modularization** Ayaz Isazadeh,Habib Izadkhah,Islam

Elgedawy,2017-10-10 This book presents source code modularization as a key activity in reverse engineering to extract the software architecture from the existing source code To this end it provides detailed techniques for source code modularization and discusses their effects on different software quality attributes Nonetheless it is not a mere survey of source code modularization algorithms but rather a consistent and unifying theoretical modularization framework and as such is the first publication that comprehensively examines the models and techniques for source code modularization It enables readers to gain a thorough understanding of topics like software artifacts proximity hierarchical and partitional modularization algorithms search and algebraic based software modularization software modularization evaluation techniques and software quality attributes and modularization This book introduces students and software professionals to

the fundamental ideas of source code modularization concepts similarity dissimilarity metrics modularization metrics and quality assurance Further it allows undergraduate and graduate students in software engineering computer science and computer engineering with no prior experience in the software industry to explore the subject in a step by step manner Practitioners benefit from the structured presentation and comprehensive nature of the materials while the large number of bibliographic references makes this book a valuable resource for researchers working on source code modularization
