SYSTEMATIC INSTRUCTION IN READING FOR SPANISH-SPEAKING STUDENTS Elva Duran,2013-04-01 Students whose first language is not English are the fastest growing group in public schools in all regions of the United States Almost 10 million children between the ages of five and 17 live in the homes and communities in which a language other than English is spoken and presently most schools in the U S are under educating many English learners The achievement of Hispanic students needs to improve dramatically over the next five years and this book describes the cornerstone elements for bringing about this change The initial chapter introduces direct instruction to be used with reading and literacy programs Chapters 2 and 3 provide excellent review of the literature in language development and address developing language instruction listening and speaking with Spanish speaking students and offers what a comprehensive language development program should look like Chapter 4 reviews academic language and literacy instruction while the next addresses the components of instruction in Spanish Chapter 6 offers lesson plan suggestions for Spanish speaking students while the following two sections discuss components that transfer and do not transfer in Spanish to English reading instruction Chapter 9 reviews English language development and provides lesson plans for implementing SDAIE programs Finally Chapter 10 discusses two way bilingual immersion and shares actual classroom schedules and lessons This unique text will help in the preparation of primary grade teachers throughout the U S so that they may be successful with Hispanic students entering the public schools with little or no English background It will also be a useful tool for school districts staff development in addressing school improvement goals for increasing the achievement of Hispanic students History of Infectious Disease Pandemics in Urban Societies Mark D. Hardt,2015-12-15 Beginning in the mid 19th century tremendous gains were made in the historical struggle with infectious diseases The emergence of modern medicine and epidemiology and the establishment of public health measures helped urban populations overcome a historical death penalty The conquest of infectious disease has created a human hubris It is a collective self delusion that infectious diseases once exposed to the light

of modern medicine science and public health would inevitably become eradicated When these advances began in the mid 19th century the world s population was under two billion mostly non urbanized At the dawn of the 21st century the world s population already surpassed seven billion The world s once far flung urban populations have exponentially expanded in number size and connectivity Infectious diseases have long benefited from the concentration of human population and their opportunistic abilities to take advantage of their interconnectedness The struggle between humans and infectious diseases is one in which there is a waxing and waning advantage of one over the other Human hubris has been challenged since the late 1970s with the prospect that infectious diseases are not eradicated Concerns have increased since the latter third of the twentieth century that infectious diseases are gaining a new foothold As pandemics from AIDS to Ebola have increased in frequency there has also developed a sense that a global pandemic of a much greater magnitude is likely to happen Tracing the historical record this book examines the manners in which population concentrations have long been associated with the spread of pandemic disease It also examines the struggle between human attempts to contain infectious diseases and the microbial struggle to contain human population advancement
