How To Program Motorola Bluetooth:

Bluetooth Application Programming with the Java APIs Essentials Edition Timothy J. Thompson, C Bala Kumar, Paul J. Kline, 2008-04-02 Adoption of Bluetooth wireless technology has become ubiquitous in the last few years. One of the biggest steps forward is the standardization of Java APIs for Bluetooth wireless technology JABWT. The latest updates to this standard is explained in detail in this book. The JABWT standard defined by the JSR 82 Java Specification Request supports rapid development of Bluetooth applications that are portable, secure, and highly usable. Wireless device manufacturers have responded overwhelmingly to the JABWT specification by implementing JABWT applications in mobile phones and other personal wireless communications products. Bluetooth Application Programming Essentials: Programming with the Java APIs explains in detail how to write Bluetooth applications using the Java APIs to exploit the power of both technologies. Written by the specification lead for JSR 82 and two other key participants in developing the standards of JABWT, this book provides the authoritative explanations and concrete examples needed to get started right away. This book provides embedded Java developers with the point information on the APIs in the specification with detailed programmatic examples of the APIs in use. A NEW chapter on the Push Registry definition, a new feature in the 1.1 version of JSR 82, has been added. Finally, the new Essentials version of the book will update the remaining chapters to reflect changes in the latest Bluetooth spec 2.1 and the industry as a whole. By focusing only on the essentials, this concise resource enables software and hardware vendors to quickly develop Bluetooth applications for mobile devices in an increasingly competitive market. The updated material examines crucial programming areas including RFCOMM, OBEX, device discovery, service discovery, and L2CAP, which allows developers to not only successfully design but master and build Java APIs for Bluetooth Wireless Technology. Includes a new and valuable chapter that delineates the pivotal Push Registry feature, a recent development that will help programmers avoid the common problem of connection collision. By providing real-world issues and problems involved in implementing the Java APIs specification, the book allows developers to identify with the text and encourages repeated reference.
