**AdS/CFT Duality User Guide** Makoto Natsuume, 2015-04-01 This book describes applications of the AdS CFT duality to the real world The AdS CFT duality is an idea that originated from string theory and is a powerful tool for analyzing strongly coupled gauge theories using classical gravitational theories In recent years it has been shown that one prediction of AdS CFT is indeed close to the experimental result of the real quark gluon plasma Since then the AdS CFT duality has been applied to various fields of physics examples are QCD nuclear physics condensed matter physics and nonequilibrium physics The aim of this book is to provide background materials such as string theory black holes nuclear physics condensed matter physics and nonequilibrium physics as well as key applications of the AdS CFT duality in a single volume The emphasis throughout the book is on a pedagogical and intuitive approach focusing on the underlying physical concepts It also includes step by step computations for important results which are useful for beginners This book will be a valuable reference work for graduate students and researchers in particle physics general relativity nuclear physics nonequilibrium physics and condensed matter physics

Laboratory,Walter Murray,1986 This report forms the user s guide for Version 4 0 of NPSOL a set of Fortran subroutines designed to minimize a smooth function subject to constraints which may include simple bounds on the variables linear constraints and smooth nonlinear constraints NPSOL may also be used for unconstrained bound constrained and linearly constrained optimization The user must provide subroutines that define the objective and constraint functions and optionally their gradients All matrices are treated as dense and hence NPSOL is not intended for large sparse problems NPSOL uses a sequential quadratic programming SQP algorithm in which the search directions is the solution of a quadratic programming QP subproblem The algorithm treats bounds linear constraints and nonlinear constraints separately The Hessian of each QP subproblem is a positive definite quasi Newton approximation to the Hessian of the Lagrangian function The steplength at each iteration is required to produce a sufficient decrease an augmented Lagrangian merit function Each QP subproblem is solved using a quadratic programming package with several features that improve the efficiency of an SQP algorithm Author
