**Reference List** , 1987 DNA Repair of Cancer Stem Cells Lesley A Mathews, Stephanie M Cabarcas, Elain Hurt, 2012-07-26

The existence of cancer stem cells CSCs has been a topic of heated debate for the last few years within the field of cancer biology. Their continuous characterization in a variety of solid tumors has led to an abundance of evidence supporting their existence. CSCs are believed to be responsible for resistance against conventional treatment regimes of chemotherapy and radiation, ultimately leading to metastasis and patient demise. To help aid clinicians, pharmaceutical companies, and academic labs investigating how to better kill these highly aggressive cells, we have summarized the DNA repair mechanisms and their role in the maintenance and regulation of both normal and cancer stem cells. Our book represents a comprehensive investigation into the highly effective DNA repair mechanisms of CSCs and what we need to understand in order to develop more advanced therapies to eradicate them from patients. Currently, there are no other published works entirely on DNA repair and Cancer Stem Cells. In addition, our book provides a comprehensive overview of CSC isolation and characterization from a variety of solid tumor types.

**Acute Lung Injury and Repair** Lynn M. Schnapp, Carol Feghali-Bostwick, 2016-11-07. Acute Respiratory Distress Syndrome (ARDS) remains an important cause of morbidity and mortality worldwide, and the incidence is predicted to increase with the aging population. Several clinical disorders can initiate ARDS, including pneumonia, sepsis, gastric aspiration, and trauma, but despite intense research over the past 40 years, we still have an incomplete understanding of the pathophysiology of the disease, and treatment remains largely supportive. This book provides an overview of acute lung injury and repair, describes current animal models to study lung injury, and reviews current methodologies to study and measure lung injury and repair. Special emphasis is given to state-of-the-art techniques and methods and relevance to human disease. **Acute Lung Injury and Repair: Scientific Fundamentals and Methods** is a useful resource for physicians and scientists who are interested in experimental model systems for insight into ARDS pathogenesis and treatment strategies.

Nelson Fausto The Greek myth of Prometheus with its picture of a vulture feasting on its chained victim has traditionally provided a visual image of liver regeneration. It is a powerful and frightening representation but if one were to substitute the vulture by a surgeon and Prometheus by a patient laying on a properly prepared operating table the outcome of the procedure would not differ significantly from that described by Greek poets. Yet few of us who work in the field have stopped long enough to ask where this myth originated. Did the poet observe a case of liver regeneration in a human being? Was it brilliant intuition or perhaps literally just a gut feeling of a poet looking for good rhymes that led to the prediction that livers grow when part of the tissue is removed? This book does not attempt to solve these historical issues. It does instead cover in detail some of the major modern themes of research on liver regeneration: injury and repair. As indicated in Dr. N. Bucher's chapter, the modern phase of experimental studies on liver regeneration started in 1931 with the publication by Higgins and Anderson of a method to perform a two-thirds resection of the liver of a rat. The technique described has 3 remarkable features: 1. it is highly reproducible, resulting in the removal of 68% of the liver; 2. it has minimal if any mortality; and 3. it consists only of blood vessel ligation and does not involve cutting through or wounding hepatic tissue.      **93 - 97**
