

Lighting the burner (see fig.2).

1. See that the voltage selector switch (7) is set at '0', i.e. is at its central (off) position.
2. Turn on the valve of the gas bottle and open any gas taps in the supply pipe to the refrigerator.

3. Turn the knob (5) of the gas control valve so that the indicator mark is opposite setting No.3.
 4. Switch on the ignition switch (4) by pushing in the bottom of the switch against the symbol '1'. The neon light in the switch should start flashing indicating that sparking is taking place.
 5. Push in fully the knob (5) of the gas control valve and keep it held in. When the burner lights, the neon in the switch will stop flashing and go out. When this happens, keep the knob (5) held in for a further 15 seconds or so for the thermocouple over the burner to heat up, then release the knob. If the neon starts flashing again, it indicates that the flame has gone out, in which case, repeat operation No.5.
 6. After lighting the burner, leave the switch (4) in the 'On' position.
- Refer to the separate Instructions for Use supplied regarding general use and care of the refrigerator.

Emergency Lighting Procedure

Although the refrigerator ignition system is primarily designed to operate from a 12V car battery, it will, in practice, operate satisfactorily on d.c. voltages considerably below this. If, therefore, the situation arises where the recommended battery supply fails, the burner can, in an emergency, be lit by using a 6V dry cell (e.g. type PP3 or PP7 9V battery, as used for radios etc.). If doing this, it is essential that the correct "+" and "-" polarity is observed when connecting up, otherwise the igniter will not operate.
