4th Kuala Lumpur International Conference on Biomedical Engineering 2008 Noor Azuan Abu Osman, Prof. Ir. Dr Fatimah Ibrahim, Wan Abu Bakar Wan Abas, Herman Shah Abdul Rahman, Hua Nong Ting, 2008-07-30 It is with great pleasure that we present to you a collection of over 200 high quality technical papers from more than 10 countries that were presented at the Biomed 2008 The papers cover almost every aspect of Biomedical Engineering from artificial intelligence to biomechanics from medical informatics to tissue engineering They also come from almost all parts of the globe from America to Europe from the Middle East to the Asia Pacific This set of papers presents to you the current research work being carried out in various disciplines of Biomedical Engineering including new and innovative researches in emerging areas As the organizers of Biomed 2008 we are very proud to be able to come up with this publication We owe the success to many individuals who worked very hard to achieve this members of the Technical Committee the Editors and the International Advisory Committee We would like to take this opportunity to record our thanks and appreciation to each and every one of them We are pretty sure that you will find many of the papers illuminating and useful for your own research and study We hope that you will enjoy yourselves going through them as much as we had enjoyed compiling them into the proceedings

Assoc Prof Dr Noor Azuan Abu Osman Chairperson Organising Committee Biomed 2008 *The Foundations of Signal Integrity* Paul G. Huray, 2009-10-22 The first book to focus on the electromagnetic basis of signal integrity The Foundations of Signal Integrity is the first of its kind a reference that examines the physical foundation of system integrity based on electromagnetic theory derived from Maxwell s Equations Drawing upon the cutting edge research of Professor Paul Huray s team of industrial engineers and graduate students it develops the physical theory of wave propagation using methods of solid state and high energy physics mathematics chemistry and electrical engineering before addressing its application to modern high speed systems Coverage includes All the necessary electromagnetic theory needed for a complete understanding of signal integrity Techniques for obtaining analytic solutions to Maxwell s Equations for ideal materials and boundary conditions Plane electromagnetic waves Plane waves in compound media Transmission lines and waveguides Ideal

models vs real world systems Complex permittivity of propagating media Surface roughness Advanced signal integrity Signal integrity simulations Problem sets for each chapter With its thorough coverage of this relatively new discipline the book serves as an ideal textbook for senior undergraduate and junior graduate students as well as a resource for practicing engineers in this burgeoning field At the end of each section it typically stimulates the reader with open ended questions that might lead to future theses or dissertation research

Maxwell's Equations Paul G. Huray, 2011-11-04 An authoritative view of Maxwell's Equations that takes theory to practice Maxwell's Equations is a practical guide to one of the most remarkable sets of equations ever devised Professor Paul Huray presents techniques that show the reader how to obtain analytic solutions for Maxwell's equations for ideal materials and boundary conditions These solutions are then used as a benchmark for solving real world problems Coverage includes An historical overview of electromagnetic concepts before Maxwell and how we define fundamental units and universal constants today A review of vector analysis and vector operations of scalar vector and tensor products Electrostatic fields and the interaction of those fields with dielectric materials and good conductors A method for solving electrostatic problems through the use of Poisson's and Laplace's equations and Green's function Electrical resistance and power dissipation superconductivity from an experimental perspective and the equation of continuity An introduction to magnetism from the experimental inverse square of the Biot Savart law so that Maxwell's magnetic flux equations can be deduced Maxwell's Equations serves as an ideal textbook for undergraduate students in junior senior electromagnetics courses and graduate students as well as a resource for electrical engineers

Electromagnetic Field Theory and Wave Propagation Uma Mukherji, 2006 Presents the basic concepts suitable for Engineering and Science Students This text deals with the useful areas of vector analysis basic principles of Electrostatics Magnetostatics Conduction of Current Polarization in Dielectric material Magnetic behavior in different materials and Different types of Capacitor Inductance
