This is the third Selecta of publications of Elliott Lieb the first two being *Stabil ity of Matter From Atoms to Stars* edited by Walter Thirring and *Inequalities* edited by Michael Loss and Mary Beth Ruskai
 A companion fourth Selecta on *Statistical Mechanics* is also edited by us
 Elliott Lieb has been a pioneer of the discipline of mathematical physics as it is nowadays understood and continues to lead several of its most active directions today
 For the first part of this selecta we have made a selection of Lieb s works on *Condensed Matter Physics*
 The impact of Lieb s work in mathematical con densed matter physics is unrivaled
 It is fair to say that if one were to name a founding father of the field Elliott Lieb would be the only candidate to claim this singular position
 While in related fields such as *Statistical Mechanics* and *Atomic Physics* many key problems are readily formulated in unambiguous mathematical form this is less so in *Condensed Matter Physics* where some say that rigor is probably impossible and certainly unnecessary
 By carefully select ing the most important questions and formulating them as well defined mathemat ical problems and then solving a good number of them Lieb has demonstrated the quoted opinion to be erroneous on both counts
 What is true however is that many of these problems turn out to be very hard
 It is not unusual that they take a decade even several decades to solve
