Interfacial Compatibility in Microelectronics Tomi Laurila,Vesa Vuorinen,Mervi Paulasto-Kröckel,Markus Turunen,Toni T. Mattila,Jorma Kivilahti,2012-01-13 Interfaces between dissimilar materials are met everywhere in microelectronics and microsystems In order to ensure faultless operation of these highly sophisticated structures it is mandatory to have fundamental understanding of materials and their interactions in the system In this difficult task the traditional method of trial and error is not feasible anymore it takes too much time and repeated efforts In *Interfacial Compatibility in Microelectronics* an alternative approach is introduced In this revised method four fundamental disciplines are combined i thermodynamics of materials ii reaction kinetics iii theory of microstructures and iv stress and strain analysis The advantages of the method are illustrated in *Interfacial Compatibility in Microelectronics* which includes solutions to several common reliability issues in microsystem technology methods to understand and predict failure mechanisms at interfaces between dissimilar materials and an approach to DFR based on deep understanding in materials science rather than on the use of mechanistic tools such as FMEA *Interfacial Compatibility in Microelectronics* provides a clear and methodical resource for graduates and postgraduates alike
