*Functions and Graphs*

Second Edition

Visitors to Yellowstone National Park want to see an eruption of the famous geyser, Old Faithful, and many people mistakenly believe that it erupts every hour. Although Old Faithful doesn't erupt on a fixed schedule, there do seem to be patterns in its eruptions. The following plot shows data from selected Old Faithful eruptions in January, 2003.

Source: [www.geyserstudy.org](http://www.geyserstudy.org)

We can make several observations about this graph. First, the graph represents a function with the duration of an eruption as input, and the time to the next eruption as output. Second, the function is increasing; as the duration of the eruption increases, so does the time to the next eruption. Finally, the points in this scatter plot lie approximately on a (straight) line.

Since the time required to wait for the next eruption is what visitors want to know, it would be useful to determine a function rule that would enable us to make such a prediction, based on how long the last eruption took. How to do this for Old Faithful is discussed in Chapter 2 of this book. This application, together with many others like it throughout the book, illustrates a central feature of mathematical modeling—finding and applying appropriate mathematical functions to describe and understand real-world situations.
