

D/2 DA4 DVI

Four Output DVI Distribution Amplifier

FEATURES

- Input: DVI-D male on attached cable
- Output: Four DVI-D female connectors
- Supports single link DVI-D signals up to 1920x1200, including HDTV 1080p/60
- DDC signals are routed to output 1
- Internal international power supply

DESCRIPTION

The Extron **D/2 DA4 DVI** is a one input, four output distribution amplifier for DVI digital video signals. It accepts DVI - Digital Visual Interface signals from a computer and distributes up to four identical, independently buffered outputs. The DVI digital output signal can be run up to 15 feet (4.6 meters) using standard DVI patch cables. For applications requiring longer cable runs, Extron has developed the IN9700 Series long distance DVI cables which allow DVI signals to be transmitted up to 75 feet (22.9 meters). For applications requiring even greater lengths, the Extron DVI 201 transmitter and receiver are capable of sending DVI signals up to 200 feet (60 meters) using CAT 5 cable, and the FDX 500 DVI fiber optic transmitter and receiver set can achieve transmissions at extreme distances up to 30 km (18.75 miles). The D/2 DA4 DVI accepts TMDS Transition Minimized Differential Signaling DVI signals at a bit rate of up to 1.6 gigabits/sec/color. It is equipped with DVI-D connectors for a single link of DVI-D.

specialists to deal with problems outside of the comfort level of a prior or current specialist With a broad medical philosophy care is more inclusive as clinicians can manage topics such as diabetes and preventive care without multiple referrals and additional appointments Family physicians are well positioned and well qualified to competently meet many of the care needs of those with cystic fibrosis This book is edited by a family medicine physician who has specialist level experience with the disease It opens with a background on cystic fibrosis foundations and centers to familiarize the reader The next chapter gives a basic overview of the disease Each of the subsequent chapters provide a comprehensive look at how cystic fibrosis affects other areas of the body that the primary care physician should be familiar with Major components of cystic fibrosis such as physiology spirometry inflammation airway clearance chronic infection cystic fibrosis related diabetes and pancreatic insufficiency among others are thoroughly explained Written by experts in the field Cystic Fibrosis in Primary Care appeals to all family physicians as well as specialists residents medical students physician assistants and nurse practitioners alike

How nature shaped echolocation in animals Mariana L Melcón, Cynthia F Moss, 2014-11-24 Echolocation has evolved in different groups of animals from bats and cetaceans to birds and humans and enables localization and tracking of objects in a dynamic environment where light levels may be very low or absent Nature has shaped echolocation an active sense that engages audiomotor feedback systems which operates in diverse environments and situations Echolocation production and perception vary across species and signals are often adapted to the environment and task In the last several decades researchers have been studying the echolocation behavior of animals both in the air and underwater using different methodologies and perspectives The result of these studies has led to rich knowledge on sound production mechanisms directionality of the sound beam signal design echo reception and perception Active control over echolocation signal production and the mechanisms for echo processing ultimately provide animals with an echoic scene or image of their surroundings Sonar signal features directly influence the information available for the echolocating animal to perceive images of its environment In many echolocating animals the information processed through echoes elicits a reaction in motor systems including adjustments in subsequent echolocation signals We are interested in understanding how echolocating animals deal with different environments e g clutter light levels tasks distance to targets or objects different prey types or other food sources presence of conspecifics or certain predators ambient and anthropogenic noise In recent years some researchers have presented new data on the origins of echolocation which can provide a hint of its evolution Theoreticians have addressed several issues that bear on echolocation systems such as frequency or time resolution target localization and beam forming mechanisms In this Research Topic we compiled recent work that elucidates how echolocation from sound production through echolocation signals to perception has been shaped by nature functioning in different environments and situations We strongly encouraged comparative approaches that would deepen our understanding of the processes comprising this active sense
