Adams, 2014-01-28 With over 40 000 described species spiders have adapted to nearly every terrestrial environment across the globe Over half of the world s spider families live within the three contiguous Pacific Coast states not surprising considering the wide variety of habitats from mountain meadows and desert dunes to redwood forests and massive urban centers This beautifully illustrated accessible guide covers all of the families and many of the genera found along the Pacific Coast including introduced species and common garden spiders The author provides readers with tools for identifying many of the region s spiders to family and when possible genus and species He discusses taxonomy distribution and natural history as well as what is known of the habits of the spiders the characters of families and references to taxonomic revisions of the pertinent genera Full color plates for each family bring to life the incredible diversity of this ancient arachnid order **Spiders of Britain & Northern Europe** Michael J. **Field Guide to South African Spiders** Ansie Dippenaar-Schoeman, 2014-02-20 This is the first ever field guide to provide information on a vast spectrum of spider species based on their morphology behaviour and distribution It s the first book to introduce all 70 South African spider families including 370 major genera and more than 860 of the more common species It includes illustrations of all of the families genera and species as well as more than 2 000 colour photographs and 843 maps A thorough summary of morphology biology and habitat requirements is provided Species with medical importance are discussed The morphological characters of all known spider families from South Africa are provided and illustrated with notes on their behavior as well as further reading material Short morphological data with notes on behaviour and distribution of 370 major genera and 860 species is provided This field guide s purpose is to enable observers to identify spiders in the field One of the difficulties facing a spider watcher is that a large number of spider species are small and extremely well camouflaged and are therefore not easily seen For some genera you will need a magnifying glass or microscope to be able to identify the specimen to generic or species level Many species can only be identified by a specialist who has access to a good microscope and the relevant literature Most of the spiders were photographed alive in their natural settings and only some rare and smaller species were photographed using a camera mounted on a microscope The illustrations and descriptions make it easy for an inexperienced spider watcher to identify many of the common species encountered in and around the house The spiders were divided according to the free living species and those that build intricate webs to catch their prey The free living spiders were further divided according to those found on the vegetation and those living on the ground Spiders are an abundant diverse and highly successful group of animals They are commonly found on farms in gardens and also in houses They are important predators in all terrestrial ecosystems and are regarded as the best friends of gardeners and farmers in sustainable agriculture because they have the important task of regulating the numbers of potentially harmful insects and mites However they are feared and maligned because of the venom they produce We hope this field guide will help save the lives of a few spiders It will be valuable for the man on the street researchers conservation agencies students gardeners farmers as well as spider watchers and photographers
