Finance And Development Michael DaCosta,2019-03-04 Although commercial banks have played an increasingly important role in providing capital to developing nations many analysts argue that private financing poses risks both to borrowing nations and the stability of the international economic system In response Mr DaCosta demonstrates that developing nations that adopt appropriate policies can gain substantially by drawing on private sources of capital His analysis indicates that many criticisms of the role of commercial banks are unfounded and that debt problems in LDCs typically are related to inadequate reserve and external debt management policies in the borrowing countries themselves Emphasizing that economic growth in LDCs often is constrained by balance of payment deficits Mr DaCosta shows that nations relying on private capital frequently experience higher than average growth rates and argues that the advantages of unconditional or untied aid generally outweigh the constraints imposed by the multilateral aid agencies In conclusion he outlines specific policies developing nations can adopt to reduce financial risk and turning to the needs of the poorest of the LDCs examines a variety of proposals aimed at increasing the flow of concessional assistance to those countries that cannot qualify for commercial bank funds
