En segundo término los procesos de revisión de imágenes que incluyen las reconstrucciones multiplanares y loteo de imágenes, mediciones segmentación y reconstrucciones 3D.

Tutoriales en Tomografía Abel Eduardo Parra, 2023-10-10 En *Tutoriales en Tomografía* entre la teoría y la práctica el autor presenta un contenido riguroso y práctico creado por y para los productores de imágenes y médicos en formación en la especialidad de imágenes. Un aspecto innovador en este libro es que sus contenidos se focalizan en las tareas inherentes al trabajo cotidiano de los técnicos y licenciados en imágenes. Cada capítulo está acompañado de numerosas figuras, fotografías, esquemas y cuadros explicativos cuidadosamente seleccionados para complementar y aclarar los conceptos presentados. Hallar guías paso a paso para la aplicación de los conceptos teóricos y parámetros en la obtención de los exámenes de tomografía sobre una interfaz gráfica similar a la de un equipo de uso clínico. El libro aborda de manera exhaustiva temas fundamentales en la TC: la administración de contraste e inyección, los protocolos de examen con su planificación y elección de parámetros de adquisición, así como la distribución y gestión de los recursos en una sala de TC. Además encontrará secciones dedicadas a la anatomía, informática, dosimetría y los principios de formación de imágenes y postprocesos. Dirigido a Estudiantes y graduados de carreras vinculadas a las imágenes, Tecnólogos licenciados y médicos residentes de la especialidad de imágenes.

Landmarking and Segmentation of 3D CT Images Shantanu Banik, Rangaraj Rangayyan, Graham Boag, 2022-06-01 Segmentation and landmarking of computed tomographic CT images of pediatric patients are important and useful in computer aided diagnosis CAD treatment planning and objective analysis of normal as well as pathological regions Identification and segmentation of organs and tissues in the presence of tumors are difficult Automatic segmentation of the primary tumor mass in neuroblastoma could facilitate

reproducible and objective analysis of the tumor's tissue composition shape and size. However, due to the heterogeneous tissue composition of the neuroblastic tumor ranging from low attenuation necrosis to high attenuation calcification, segmentation of the tumor mass is a challenging problem. In this context, methods are described in this book for identification and segmentation of several abdominal and thoracic landmarks to assist in the segmentation of neuroblastic tumors in pediatric CT images. Methods to identify and segment automatically the peripheral artifacts and tissues, the rib structure, the vertebral column, the spinal canal, the diaphragm, and the pelvic surface are described. Techniques are also presented to evaluate quantitatively the results of segmentation of the vertebral column, the spinal canal, the diaphragm, and the pelvic girdle by comparing with the results of independent manual segmentation performed by a radiologist. The use of the landmarks and removal of several tissues and organs are shown to assist in limiting the scope of the tumor segmentation process to the abdomen to lead to the reduction of the false positive error and to improve the result of segmentation of neuroblastic tumors.

Soft computing has provided sophisticated methodologies for the development of intelligent decision support systems. Fast advances in soft computing technologies such as fuzzy logic and systems, artificial neural networks, and evolutionary computation have made available powerful problem representation and modelling paradigms and learning and optimisation mechanisms for addressing modern decision making issues. This book provides a comprehensive coverage of up to date conceptual frameworks in broadly perceived decision support systems and successful applications. Different from other existing books, this volume predominately focuses on applied decision support with soft computing. Areas covered include planning, management, finance, and administration in both the private and public sectors.
