Demythologizing Educational Reforms Arthur T. Costigan, Leslee Grey, 2014-08-21 There are dozens of myths surrounding educational reform today maintaining the school's role in economic competitiveness the deficiency of teachers the benefits of increased testing and the worthiness of privatization In this volume the editors argue that this discussion has been co-opted to reflect the values and worldviews of special interest groups such as elites in power politicians corporate educational foundations and the media Prominent educational writers tackle contemporary issues such as neoliberalism suburban schooling charter schools and parental involvement They expose the logic behind the talk and critically examine these problematic beliefs to uncover meaningful improvements in education which are better grounded in the social economic political and educational realities of contemporary society

Evaluating the Impact of Development Projects on Poverty Judy L. Baker, 2000 Despite the billions of dollars spent on development assistance each year there is still very little known about the actual impact of projects on the poor There is broad evidence on the benefits of economic growth investments in human capital and the provision of safety nets for the poor But for a specific program or project in a given country is the intervention producing the intended benefits and what was the overall impact on the population Could the program or project be better designed to achieve the intended outcomes Are resources being spent efficiently These are the types of questions that can only be answered through an impact evaluation an approach which measures the outcomes of a program intervention in isolation of other possible factors This handbook seeks to provide project managers and policy analysts with the tools needed for evaluating project impact It is aimed at readers with a general knowledge of statistics For some of the more in depth statistical methods discussed the reader is referred to the technical literature on the topic Chapter 1 presents an overview of concepts and methods Chapter 2 discusses key steps and related issues to consider in implementation Chapter 3 illustrates various analytical techniques through a case study Chapter 4 includes a discussion of lessons learned from a rich set of good practice evaluations of poverty projects which have been reviewed for this handbook

International Teacher Judgement Practices Val Klenowski, 2017-10-02

Human judgements underlie all assessments regarding the quality of students understandings and such judgements are conceptually complex and elusive The study of the complexity of the judgement process is in its infancy but clearly warrants further critical investigation However what is demonstrated from the wide variety of international teacher judgement practices presented in this volume is that teacher judgement requires a lot more than a set of standards criteria and annotated examples Understandings of assessment theory by pre service teachers through to more experienced teachers and opportunities for all to critically reflect and consider their judgements of student work are vital Teachers are struggling to maintain their interpretive freedom at the local professional level in contexts where central policies promote standardisation or regulation of judgement practice for accountability purposes This book was originally published as a special issue of Assessment in Education principles policy practice The Role of Scientists in the Professional Development of Science Teachers National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Biology Teacher Inservice Programs, 1996-04-29 Scientists nationwide are showing greater interest in contributing to the reform of science education yet many do not know how to begin This highly readable book serves as a guide for those scientists interested in working on the professional development of K 12 science teachers Based on information from over 180 professional development programs for science teachers the volume addresses what kinds of activities work and why Included are useful examples of programs focusing on issues of content and process in science teaching The authors present day in a life vignettes along with a suggested reading list to help familiarize scientists with the professional lives of K 12 science teachers The book also offers scientists suggestions on how to take first steps toward involvement how to identify programs that have been determined effective by teachers and how to become involved in system wide programs Discussions on ways of working with teachers on program design program evaluation and funding sources are included Accessible and practical this book will be a welcome resource for university institutional and corporate scientists teachers teacher educators organizations administrators and parents
