

Remember...

It's difficult to tell a wild animal on its own that it's running or moving, despite what you see. Before you can explain the animal's running, you need to see it first.

Vital Shots

Every hunter wants to bring home the game he or she is seeking, and experience is the best way to achieve this. To achieve this, you must be able to tell the animal's running or moving, despite what you see. Before you can explain the animal's running, you need to see it first.

Where To Shoot

- The most effective shot is delivered to an animal's vital organs—heart and lungs. In large game animals, these organs lie in the chest cavity behind the front shoulder. A long shot is the most effective shot for big game.
- The aim of the vital organs shot is to cause major blood vessel and nerve damage. A shot to the vital organs causes considerable bleeding. If the animal drops the immediately and dies on the spot, it will have a blood trail that's easy to track.
- Aside from being a good technique, the key to a clean kill is precision. Hunters should aim shots in the vital organs only. If you do not have a clean shot in the vital organs, aim just behind the animal's front legs for a clean kill.

The most effective (vital) shot for a turkey is to the head and neck. The greatest shot angle for turkeys is to the head and neck.

Choosing the Proper Shot Angle

The shot angle is the angle at which the animal is standing in relation to the hunter. Knowing which angles offer the most effective—and least effective—shots is an essential part of being a responsible hunter.

Broadside

The broadside shot angle is the preferred shot angle for both hunters and both hunters for large game animals, such as elk, deer, and bear.

- **Elk:** The broadside position offers several excellent shots for a hunter. The best angle is the shoulder and chest area. A bullet of the correct weight that is fired from a distance adequate for the game will break the shoulder bone and sever the lungs or heart.
- **Bear:** The broadside angle offers the best shot for the largest big game animals, such as elk, deer, and bear. For most big game, the aiming spot is straight up from the back side of the front leg, one-third of the way up from the bottom of the chest. The game will penetrate the ribs but not the shoulder bone, and the shot will be forward, and not behind the shoulder.
- **Quarrying Away:** The quarrying away shot angle is when your target is facing away from you but at an angle. The animal is usually looking away from you.
 - **Elk:** For hunters hunting, the quarrying away position offers several strong spots on all big game. The area just behind the shoulder is the best aiming spot for close penetration of the vital organs. From the quarrying away shot, the animal is facing away from you.

The preferred shot for large game animals, such as elk, deer, and bear is broadside.

Firing Positions

There are four standard rifle firing positions: prone, kneeling, sitting, and standing.

Prone

The prone position is the most stable of the four positions. Because it's the easiest to hold, it's the best position for maximizing the effectiveness of long-range, heavily scoped, trigger systems, and follow-through.

Safety Tip

Shooting a firearm can cause serious and permanent injury, loss of life, and property damage.

- When shooting any firearm, always wear properly fitting eye protection. For target practice, you can opt to wear eye protection with a high level of protection (HHP).

When hunting, eye protection is not worn. Always be alert when hunting in areas where hunting is not allowed. Always be alert when hunting in areas where hunting is not allowed. Always be alert when hunting in areas where hunting is not allowed.

- Use your visible eye protection, such as shooting glasses, only if you're hunting. After shooting, it's your job to wear eye protection.

Kneeling

With neither arm supported, this is the most difficult position for firing an accurate shot. Unless the target is very close, which is impossible, so to long movement of the barrel is a small area of profile. Instead, several moves will produce the best shot.

Sitting

Both arms are supported by your legs. Close to the prone position, this is the most stable position.

Standing

With only one arm braced, the standing position is less steady than the prone and sitting positions.
