*Laboratory Methods in Dynamic Electroanalysis* M. Teresa Fernández Abedul, 2019-10-13 *Laboratory Methods in Dynamic Electroanalysis* is a useful guide to introduce analytical chemists and scientists of related disciplines to the world of dynamic electroanalysis using simple and low cost methods. The trend toward decentralization of analysis has made this fascinating field one of the fastest growing branches of analytical chemistry. As electroanalytical devices have moved from conventional electrochemical cells 10-20 mL to current cells e.g. 5-50 mL based on different materials such as paper or polymers that integrate thick or thin film electrodes, interesting strategies have emerged such as the combination of microfluidic cells and biosensing or nanostructuring of electrodes. This book provides detailed easy procedures for dynamic electroanalysis and covers the main trends in electrochemical cells and electrodes including microfluidic electrodes, electrochemical detection in microchip electrophoresis, nanostructuring of electrodes, development of bio-enzymatic, immuno and DNA assays, paper-based electrodes, interdigitated array electrodes, multiplexed analysis and combination with optics. Different strategies and techniques: amperometric, voltammetric and impedimetric are presented in a didactic practice-based way and a bibliography provides readers with additional sources of information. Provides easy to implement experiments using low cost simple equipment. Includes laboratory methodologies that utilize both conventional designs and the latest trends in dynamic electroanalysis. Goes beyond the fundamentals covered in other books focusing instead on practical applications of electroanalysis.

**Interactive Multimedia** Ioannis Deliyannis, 2012-03-07 Interactive multimedia is clearly a field of fundamental research, social, educational and economical importance as it combines multiple disciplines for the development of multimedia systems that are capable to sense the environment and dynamically process, edit, adjust or generate new content. For this purpose, ideas, theories, methodologies and inventions are combined in order to form novel applications and systems. This book presents novel scientific research, proven methodologies and interdisciplinary case studies that exhibit advances under Interfaces and Interaction. Interactive Multimedia Learning, Teaching and Competence Diagnosis Systems, Interactive TV, Film and Multimedia Production and Video Processing. The chapters selected for this volume offer new perspectives in terms of strategies, tested practices and solutions that beyond describing the state of the art may be utilised as a solid basis for the development of new interactive systems and applications.
