The Syntax of Surprise Matteo Greco,2019-11-22 Negation is a universal syntactic phenomenon only employed in human languages People use negative sentences in everyday conversations and they display complex semantic and syntactic properties when doing so Crucially some languages employ negative sentences to assert affirmative and surprise propositions A clear example of this is offered by Italian as in E non not mi scesa dal treno Maria Maria got off the train This special type of negation is called surprise negation and it belongs to the class of expletive negation This book sheds light on this puzzling phenomenon by means of a theoretical analysis and an experimental study It explores the contexts mainly syntactic in which negation receives its expletive interpretation and considers whether expletive negation is grammatically

diplomacy over a long time period from the early 1960s setting its dangerous brinkmanship in the wider context of North Korea's military and diplomatic campaigns to achieve its political goals. It argues that the last four decades of military adventurism demonstrates Pyongyang's consistent calculated use of military tools to advance strategic objectives vis-à-vis its adversaries. It shows how recent behavior of the North Korean government is entirely consistent with its behavior over this longer period: the North Korean government's conduct rather than being haphazard or reactive is rational in the Clausewitzian sense of being ready to use force as an extension of diplomacy by other means. The book goes on to demonstrate that North Korea's calculated adventurism has come full circle: what we are seeing now is a modified repetition of earlier events such as the Pueblo incident of 1968 and the nuclear and missile diplomacy of the 1990s. Using extensive interviews in the United States and South Korea including those with defected North Korean government officials alongside newly declassified first-hand material from U.S., South Korean, and former Communist bloc archives, the book argues that whilst North Korea's military/diplomatic campaigns have intensified, its policy objectives have become more conservative and are aimed at regime survival, normalization of relations with the United States and Japan, and obtaining economic aid.

**Understanding Intelligence Failure** James J. Wirtz, 2016-11-10. This collection comprising key works by James J. Wirtz explains how different threat perceptions can lead to strategic surprise, attack, intelligence failure, and the failure of deterrence. This volume adopts a strategist's view of the issue of surprise and intelligence failure by placing these phenomena in the context of conflict between strong and weak actors in world affairs. A two-level theory explains the incentives and perceptions of both parties when significant imbalances of military power exist between potential combatants and how this situation sets the stage for strategic surprise and intelligence failure to occur. The volume illustrates this theory by applying it to the Kargil Crisis attacks launched by non-state actors and by offering a comparison of Pearl Harbor and the September 11, 2001 attacks. It explores the phenomenon of deterrence failure specifically how weaker parties in an enduring or nascent conflict come to believe that deterrent threats posed by militarily stronger antagonists will be undermined by various constraints, increasing the attractiveness of utilizing surprise attack to achieve their objectives. This work also offers strategies that could mitigate the occurrence of intelligence failure, strategic surprise, and the failure of deterrence. This book will be of much interest to students of intelligence studies, strategic studies, security studies, and IR in general. Great Songwriting Techniques Jack Perricone, 2018.
