Elements Of Differentiable Dynamics And Bifurcation Theory David Ruelle:

Elements of Differentiable Dynamics and Bifurcation Theory David Ruelle, 2014-05-10 Elements of Differentiable Dynamics and Bifurcation Theory provides an introduction to differentiable dynamics with emphasis on bifurcation theory and hyperbolicity that is essential for the understanding of complicated time evolutions occurring in nature This book discusses the differentiable dynamics vector fields fixed points and periodic orbits and stable and unstable manifolds The bifurcations of fixed points of a map and periodic orbits case of semiflows and saddle node and Hopf bifurcation are also elaborated This text likewise covers the persistence of normally hyperbolic manifolds hyperbolic sets homoclinic and heteroclinic intersections and global bifurcations This publication is suitable for mathematicians and mathematically inclined students of the natural sciences

Introduction to Dynamical Systems Michael Brin, Garrett Stuck, 2002-10-14 This book provides a broad introduction to the subject of dynamical systems suitable for a one or two semester graduate course In the first chapter the authors introduce over a dozen examples and then use these examples throughout the book to motivate and clarify the development of the theory Topics include topological dynamics symbolic dynamics ergodic theory hyperbolic dynamics one dimensional dynamics complex dynamics and measure theoretic entropy The authors top off the presentation with some beautiful and remarkable applications of dynamical systems to such areas as number theory data storage and Internet search engines This book grew out of lecture notes from the graduate dynamical systems course at the University of Maryland College Park and reflects not only the tastes of the authors but also to some extent the collective opinion of the Dynamics Group at the University of Maryland which includes experts in virtually every major area of dynamical systems

Lectures on Morse Homology Augustin Banyaga, David Hurtubise, 2004-10-29 This book offers a detailed presentation of results needed to prove the Morse Homology Theorem using classical techniques from algebraic topology and homotopy theory The text presents results that were formerly scattered in the mathematical literature in a single reference with complete and detailed proofs The core material includes CW complexes Morse theory hyperbolic dynamical systems the Lambda Lemma the Stable Unstable Manifold Theorem transversality theory the Morse Smale Witten boundary operator and Conley index theory

Statistical Mechanics Scott Sheffield, Thomas Spencer, Variable Quality in Consumer Theory

W.M. Wadman, 2016-07-01 Examines consumer decision making on products and services of variable quality at the level of retail markets Addresses for the first time consumer producer interaction at the level of the individual consumer issues of quality consumption experience and willingness to pay as exhibited by individual consumers and how these issues affect the decision making process

Global Analysis of Dynamical Systems H.W Broer, B Krauskopf, Gert Vegter, 2001-06-18 Contributed by close colleagues friends and former students of Floris Takens Global Analysis of Dynamical Systems is a liber amicorum dedicated to Takens for his 60th birthday The first chapter is a reproduction of Takens s 1974 paper Forced oscillators and bifurcations that was previously available only as a preprint of the University of Utrecht Among other

important results it contains the unfolding of what is now known as the Bogdanov Takens bifurcation The remaining chapters cover topics as diverse as bifurcation theory Hamiltonian mechanics homoclinic bifurcations routes to chaos ergodic theory renormalization theory and time series analysis In its entirety the book bears witness to the influence of Takens on the modern theory of dynamical systems and its applications This book is a must read for anyone interested in this active and exciting field

Introduction to the Modern Theory of Dynamical Systems Anatole Katok, A. B. Katok, Boris Hasselblatt, 1995 This book provided the first self contained comprehensive exposition of the theory of dynamical systems as a core mathematical discipline closely intertwined with most of the main areas of mathematics The authors introduce and rigorously develop the theory while providing researchers interested in applications with fundamental tools and paradigms The book begins with a discussion of several elementary but fundamental examples These are used to formulate a program for the general study of asymptotic properties and to introduce the principal theoretical concepts and methods The main theme of the second part of the book is the interplay between local analysis near individual orbits and the global complexity of the orbit structure The third and fourth parts develop the theories of low dimensional dynamical systems and hyperbolic dynamical systems in depth Over 400 systematic exercises are included in the text The book is aimed at students and researchers in mathematics at all levels from advanced undergraduate up
