*Production Technology for Deep Reservoirs* Yan Peng, Yishan Liu, Hongyan Qu, Feng Dong, Jiehao Wang, 2024-11-28 Underground energy is important for the whole society development but conventional underground energy is becoming exhausted The energy for deep reservoirs usually 3500m for petroleum engineering 1000m for mining engineering is diverse including not limited shale gas oil tight gas oil hot dry rock geothermal reservoirs and coal gasification Although it has abundant reserves the energy production from deep reservoirs is difficult in stimulations because the geological conditions for those deep reservoirs are tougher than those for conventional reservoirs such as high in situ stress obvious heterogeneity in rock properties and complex natural fracture networks Meanwhile common technologies also have environmental impacts The development trend of production technology for deep reservoirs requires it to be environment friendly or decrease environmental impacts at least CO2 utilization may achieve this environmental aim In order to efficiently produce energy from deep reservoirs technological innovation is booming around North America Europe and Asia

**The Craft of Model-Based Testing** Paul C. Jorgensen, 2017-05-08 In his latest work author Paul C Jorgensen takes his well honed craftsman s approach to mastering model based testing MBT To be expert at MBT a software tester has to understand it as a craft rather than an art This means a tester should have deep knowledge of the underlying subject and be well practiced in carrying out modeling and testing techniques Judgment is needed as well as an understanding of MBT the tools The first part of the book helps testers in developing that judgment It starts with an overview of MBT and follows with an in depth treatment of nine different testing models with a chapter dedicated to each model These chapters are tied together by a pair of examples a simple insurance premium calculation and an event driven system that describes a garage door controller The book shows how simpler models flowcharts decision tables and UML Activity charts express the important aspects of the insurance premium problem It also shows how transition based models finite state machines Petri nets and statecharts are necessary for the garage door controller but are overkill for the insurance premium problem Each chapter describes the extent to which a model can support MBT The second part of the book gives testers a greater understanding of MBT tools It examines six commercial MBT products presents the salient features of each product and demonstrates using the product on the insurance premium and the garage door controller problems These chapters each conclude with advice on implementing MBT in an organization The last chapter describes six Open Source tools to round out a tester s knowledge of MBT In addition the book supports the International Software Testing Qualifications Board s ISTQB MBT syllabus for certification

Principles of Practice in Multi-Agent Systems Jung-Jin Yang, Makoto Yokoo, Takayuki Ito, Zhi Jin, Paul Scerri, 2009-12-15 Agents are software processes that perceive and act in an environment processing their perceptions to make intelligent decisions about actions to achieve their goals Multi agent systems have multiple agents that work in the

same environment to achieve either joint or conflicting goals Agent computing and technology is an exciting emerging paradigm expected to play a key role in many society changing practices from disaster response to manufacturing to agriculture Agent and mul agent researchers are focused on building working systems that bring together a broad range of technical areas from market theory to software engineering to user interfaces Agent systems are expected to operate in real world environments with all the challenges complex environments present After 11 successful PRIMA workshops conferences Pacific Rim International Conference Workshop on Multi Agents PRIMA became a new conference titled International Conference on Principles of Practice in Multi Agent Systems in 2009 With over 100 submissions an acceptance rate for full papers of 25% and 50% for posters a demonstration session an industry track a RoboCup competition and workshops and tutorials PRIMA has become an important venue for multi agent research Papers submitted are from all parts of the world though with a higher representation of Pacific Rim countries than other major multi agent research forums This volume presents 34 high quality and exciting technical papers on multimedia research and an additional 18 poster papers that give brief views on exciting research

Conformance Checking and Simulation-based Evolutionary Optimization for Deployment and Reconfiguration of Software in the Cloud Sören Frey, 2014-01-30 Many SaaS providers nowadays want to leverage the cloud's capabilities also for their existing applications for example to enable sound scalability and cost effectiveness This thesis provides the approach CloudMIG that supports SaaS providers to migrate those applications to IaaS and PaaS based cloud environments CloudMIG consists of a step by step process and focuses on two core components 1 Restrictions imposed by specific cloud environments

so called cloud environment constraints CECs such as a limited file system access or forbidden method calls can be validated by an automatic conformance checking approach 2 A cloud deployment option CDO determines which cloud environment cloud resource types deployment architecture and runtime reconfiguration rules for exploiting a cloud s elasticity should be used The implied performance and costs can differ in orders of magnitude CDOs can be automatically optimized with the help of our simulation based genetic algorithm CDOXplorer Extensive lab experiments and an experiment in an industrial context show CloudMIG s applicability and the excellent performance of its two core components *The Shock and Vibration Digest*, 1981
