Voices of Justice and Reason Geoffrey V. Davis,2021-10-25 Over the past fifty years transformations of great moment have taken place in South Africa Apartheid and the subsequent transition to a democratic non racial society in particular have exercised a profound effect on the practice of literature This study traces the development of literature under apartheid then seeks to identify the ways in which writers and theatre practitioners are now facing the challenges of a new social order The main focus is on the work of black writers prime among them Matsemela Manaka Mtutuzeli Matshoba and Richard Rive who as politically committed members of the

oppressed majority bore witness to the black experience through their writing. Despite the draconian censorship system they were able to address the social problems caused by racial discrimination in all areas of life particularly through forced removals, the migrant labour system and the creation of the homelands. Their writing may be read both as a comprehensive record of everyday life under apartheid and as an alternative cultural history of South Africa. Particular attention is paid to theatre as a barometer of social change in South Africa. The concluding chapters consider how in the current period of transition writers and arts institutions have set about reassessing their priorities, redefining their function and seeking new aesthetic directions in taking up the challenge of imagining a new society.

South Africa Geoffrey V. Davis, 1994 **The Journal of the Botanical Society of South Africa**, 1983 *In the Company of Mushrooms* Moselio Schaechter, Elio Schaechter, 1998 We might slice them into a salad, savor them in a sauce, wonder at their power to intoxicate or poison, marvel at their multifarious presence in the forest, but few of us realize that mushrooms humbly thriving on decay are crucial to life on Earth as we know it. In this book a distinguished biologist long intrigued by the secret life of fungi reveals the power of these curious organisms, not quite animal, not quite plant, to enchant and instruct, to nourish and make way for all sorts of superior forms of nature. In a style at once learned and quirky, personal and commanding, Elio Schaechter imparts the fascinating minutiae and the weighty implications of his subject: a primarily microscopic life form that nonetheless accounts for up to two tons of matter for every human on the planet. He shows us how fungi, the great decomposers, recycle most of the world's vegetable matter from a blade of grass to a strapping tree and thus prevent us from sinking under ever accumulating masses of decaying matter. With the same expertise and contagious enthusiasm that he brings to the biology of mushrooms, Schaechter conveys the allure of the mushroom hunt. Drawing on his own experience as well as that of seasoned pickers and amateur mycologists, he explains when and where to find mushrooms, how they are cultivated and how they are used in various cultures. From the delectable to the merely tolerable, from the hallucinogenic to the deadly, a wide variety of mushrooms are covered in this spirited presentation.
