Time Dilation* Magdalena Zych,2017-02-06 This thesis introduces a new theoretical tool to explore the notion of time and
temporal order in quantum mechanics the relativistic quantum clock framework It proposes novel thought experiments
showing that proper time can display quantum features e g when a clock runs different proper times in superposition The
resulting new physical effects can be tested in near future laboratory experiments with atoms molecules and photons as
clocks The notion of time holds the key to the regime where quantum theory and general relativity overlap which has not
been directly tested yet and remains largely unexplored by the theory The framework also applies to scenarios in which
causal relations between events become non classical and which were previously considered impossible to address without
refuting quantum theory The relativistic quantum clock framework offers new insights into the foundations of quantum
theory and general relativity *Holt Science and Technology* 2002 Holt Rinehart & Winston,Holt, Rinehart and Winston
