

The Denominators are the Same

Example:

$$\frac{1}{5} + \frac{3}{5}$$

Both fractions have the same denominator (they are both 5).

The Denominators are Different

Example:

$$\frac{1}{2} + \frac{3}{7}$$

The fractions have different denominators (2 and 7).

The Amazing 8-Day, Super-Simple, Scripted Guide to Teaching or Learning Fractions Lisa Hernandez, M.S. Ed., 2015-02-21 Welcome to The Amazing 8 Day Super Simple Scripted Guide to Teaching or Learning Fractions I have attempted to do just what the title says make learning fractions super simple I have also attempted to make it fun and even ear catching The reason for this is not that I am a frustrated stand up comic but because in my fourteen years of teaching the subject I have come to realize that my jokes even the bad ones have a crazy way of sticking in my students heads And should I use a joke even a bad one repetitively the associations become embedded in their brains many times to their chagrin What is so different about this book First of all it is scripted so that tutors parents and teachers alike can deliver the lessons easily and without frustration Secondly the scripts and lessons have been carefully crafted to be ageless that is to apply to any learner based on age or level of mathematical mastery Finally the lessons have been carefully culled and edited over a decade in order to include the most necessary information in a finite and reasonable timetable something in this educator's opinion other books seem to lack

Fractions:

Multiply and Divide Workbook Maria Miller, 2016-02-03 We start out in the fifth grade workbook Fractions Multiply and Divide by simplifying fractions Since this process is the opposite of making equivalent fractions it should be relatively simple for students to understand We also use the same visual model as we would for making equivalent fractions just backwards The pie pieces are joined together instead of split apart Next comes multiplying a fraction by a whole number Since this can be solved by repeated addition it is not a difficult concept at all Multiplying a fraction by a fraction is first explained as taking a certain part of a fraction in order to teach the concept After that students are shown the usual shortcut for the multiplication of fractions Simplifying before multiplying is a process that is not absolutely necessary for fifth graders I have included it here because it prepares students for the same process in future algebra studies and because it makes fraction multiplication easier I have also tried to include explanations of why we are allowed to simplify before multiplying These explanations are actually proofs I feel it is a great advantage for students to get used to mathematical reasoning and proof methods well before they start high school geometry Then we find the area of a rectangle with fractional side lengths and show that the area is the same as it would be found by multiplying the side lengths Students multiply fractional side lengths to find areas of rectangles and represent fraction products as rectangular areas Students also multiply mixed numbers and study how multiplication can be seen as resizing or scaling This means for example that the multiplication $2\frac{3}{4} \times 18$ km can be thought of as finding two thirds of 18 km Next we study division of fractions in special cases The first one is seeing fractions as divisions in other words recognizing that $5\frac{1}{3}$ is the same as $5\frac{1}{3}$ This of course gives us a means of dividing whole numbers and getting fractional answers for example $20 \div 6 = 3\frac{2}{3}$ Then students encounter sharing divisions with fractions For example if two people share equally $4\frac{5}{6}$ of a pizza how much will each person get This is represented by the division $4\frac{5}{6} \div 2 = 2\frac{5}{6}$ Another case we study is dividing unit fractions by whole numbers such as $1\frac{2}{4}$ We also divide whole numbers by unit fractions such as $6 \div \frac{1}{3}$ Students will solve these thinking how many times the divisor fits into the dividend The last lesson is an introduction to ratios and is optional Ratios will be studied a lot in 6th and 7th grade especially in connection with proportions We are laying the groundwork for that here

Unpacking Fractions Monica Neagoy, 2017-03-10 For years the teaching and learning of fractions has been associated with rote memorization But this mechanical approach to instruction which strips students of an ability to reason or make sense of math has resulted in a failure of understanding Author Monica Neagoy drawing on decades of research studies evidence from teacher practice and 25 years of experience working around the world with teachers students and parents addresses seven big ideas in the teaching and learning of fractions in grades 2-6 Each idea is supported by a vignette from a real classroom common misconceptions a thorough unpacking of productive mathematical thinking and several multistep and thought provoking problems for teachers to explore She offers three fundamental reasons why it is imperative for us to take a closer look at how we teach fractions Fractions play a key role in students feelings about mathematics Fractions are fundamental to school math and daily life Fractions are foundational to

Visual Fractions Pi Squared, 2011-05-28 This math workbook from the Dr Pi Squared Math Workbooks series aims to teach what a fraction is and help kids visualize fractions It is designed for kids who are just learning about fractions The problems consist of colorful pictures from which kids are to determine fractions The book begins with circles cut into pie slices from halves to twelfths The students need to determine what fraction of each pie is blue yellow and red For example if a pie is divided into fourths two of which are blue one yellow and the other red the student would answer one half one fourth and one fourth After ample practice with pie slices the workbook moves onto triangles squares and hexagons A couple of pages include groups of circles where kids need to determine fractions greater than one for example two and a half circles might be colored green Other visual fraction problems include rectangles smiley faces arrows letters and numbers Toward the end of the workbook some questions ask about more than just colors like what fraction of the arrows point up or what fraction of the letters are vowels Answers are nicely organized by page number in the back of the book to allow students parents or teachers to quickly check the answers There is ample workspace for students to write large answers and still fit their solutions comfortably into the space provided The problems appear in a large font size since students usually write larger than standard textbook fonts High quality

durable bright paper is used instead of standard workbook paper which often tears easily and appears dull in color
