Applied Algebra, Algebraic Algorithms and Error-Correcting Codes Tom Høholdt, 2003-04-28 This book constitutes the refereed proceedings of the 15th International Symposium on Applied Algebra Algebraic Algorithms and Error Correcting Codes AAEECC 15 held in Toulouse France in May 2003 The 25 revised full papers presented together with 2 invited papers were carefully reviewed and selected from 40 submissions Among the subjects addressed are block codes algebra and codes rings fields and AG codes cryptography sequences decoding algorithms and algebra constructions in algebra Galois groups differential algebra and polynomials Official Gazette of the United States Patent and Trademark Office ,2002 *List Decoding of Error-Correcting Codes* Venkatesan Guruswami, 2004-11-29 How can one exchange information effectively when the medium of communication introduces errors This question has been investigated extensively starting with the seminal works of Shannon 1948 and Hamming 1950 and has led to the rich theory of error correcting codes This theory has traditionally gone hand in hand with the algorithmic theory of decoding that tackles the problem of recovering from the errors efficiently This thesis presents some spectacular new results in the area of decoding algorithms for error correcting codes Specifically it shows how the notion of list decoding can be applied to recover from far more errors for a wide variety of error correcting codes than achievable before A brief bit of background error correcting codes are combinatorial structures that show how to represent or encode information so that it is resilient to a moderate number of errors Specifically an error correcting code takes a short binary string called the message and shows how to transform it into a longer binary string called the codeword so that if a small number of bits of the codeword are flipped the resulting string does not look like any other codeword The maximum number of errors that the code is guaranteed to detect denoted  $d$  is a central parameter in its design A basic property of such a code is that if the number of errors that occur is known to be smaller than  $d/2$  the message is determined uniquely This poses a computational problem called the decoding problem compute the message from a corrupted codeword when the number of errors is less than  $d/2$  **Index of Patents Issued from the United States Patent and Trademark Office** ,1993 **Official Gazette of the United States Patent and Trademark Office** United States.
