

Once we have found some points on the graph of the line we are able to graph the line.

Method 2.

1. Given the equation $y = -2x + 8$, find the y-intercept. y-intercept is 8. Therefore one point on the line is (0, 8).

2. Now having one point on the line, graph the y-intercept and apply the slope multiple times.

Slope is rise over run so we know that we must go up or down based on the number in the numerator and go left or right based on the number in the denominator.

Select a method and graph the equation above.

Practice!

On the following page graph the following equations

1. $y = 4x + 3$

2. $y = -x - 2$

3. $y = -2x + 2$

4. $y = -2x - 2$

5. $y = 3x - 4$

6. $y = \frac{1}{2}x + 3$

7. $y = -5x - 1$

8. $y = -25x - 4$

9. $y = \frac{2}{3}x + 3$

10. $y = \frac{1}{4}x - 3$

teacher preparation programs The content of the book is suited especially for those students who are further along in their mathematics education preparation as the text is more involved with mathematical ideas and problem solving and discusses some of the intricate pedagogical considerations that arise in teaching The text is written not as an introduction to mathematics education a first course but rather as a second or probably third course The book deals both with general methodology issues in mathematics education incorporating a problem solving approach Chapters 1 6 and with more concrete applications within the context of specific topics algebra geometry and discrete mathematics Chapters 7 13 The book provides opportunities for teachers to engage in authentic mathematical thinking The mathematical ideas under consideration build on specific middle and secondary school content while simultaneously pushing the teacher to consider more advanced topics as well as various connections across mathematical domains The book strives to preserve the spirit of discussion and at times even argument typical of collaborative work on a lesson plan Based on the accumulated experience of work with future and current teachers the book assumes that students have some background in lesson planning and extends their thinking further Specifically this book aims to provide a discussion of how a lesson plan is constructed including the ways in which problems are selected or invented rather than the compilation of prepared lesson plans This approach reflects the authors view that the process of searching for an answer is often more important than the formal result **Jacaranda**
