Solodovnikov, 1980-02 This volume describes the relationship between systems of linear inequalities and the geometry of convex polygons examines solution sets for systems of linear inequalities in two and three unknowns extension of the processes introduced to systems in any number of unknowns is quite simple and examines questions of the consistency or inconsistency of such systems Finally it discusses the field of linear programming one of the principal applications of the theory of systems of linear inequalities A proof of the duality theorem of linear programming is presented in the last section

Systems of Linear Inequalities Aleksandr Samuilovich Solodovnikov, 1979      Equations and Inequalities Guido Walz, 2021-07-02 The book teaches the basics of solving equations and inequalities in easily understandable language One of the main topics is the solving of quadratic equations regardless of whether they already exist in normal form or have to be brought into it first The author treats the p q formula and the midnight formula as tools for this purpose In addition the book deals with linear equations and in general with the question of which manipulations one may make on an equation without changing its solutions Furthermore the most important inequalities are treated and strategies for their solution are shown This Springer essential is a translation of the original German 1st edition essentials Gleichungen und Ungleichungen by Guido Walz published by Springer Fachmedien Wiesbaden GmbH part of Springer Nature in 2018 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors
