

A company is tracking the number of times a post to a popular social internet site has been shared. The data is shown below

Hours, x	1	2	3	4	5	6
Shares, y	28	44	49	65	88	100

- Determine a linear regression model and an exponential regression model that best fits these data. Round all parameters to the nearest tenth.
- The correlation coefficient for both models, when rounded to the nearest hundredth is $r = 0.99$. What does this tell you about the predictive ability of these models.
- Does your linear model from part A over or under predict the number of shares at 6 hours?
- After 24 hours, the post has been shared 10,952 times. Which model does a better job extrapolating the data trend out to 24 hours? Justify.
