**Integrated Circuit and System Design. Power and Timing Modeling, Optimization and Simulation** José L. Ayala, Delong Shang, Alex Yakovlev, 2013-01-03 This book constitutes the refereed proceedings of the 22nd International Conference on Integrated Circuit and System Design PATMOS 2012 held in Newcastle UK Spain in September 2012 The 25 revised full papers presented were carefully reviewed and selected from numerous submissions The paper feature emerging challenges in methodologies and tools for the design of upcoming generations of integrated circuits and systems including reconfigurable hardware such as FPGAs The technical program focus on timing performance and power consumption as well as architectural aspects with particular emphasis on modeling design characterization analysis and optimization

Asynchronous System-on-Chip Interconnect John Bainbridge, 2013-11-11 Asynchronous System on Chip Interconnect describes the use of an entirely asynchronous system bus for the modular construction of integrated circuits Industry is just awakening to the benefits of asynchronous design in avoiding the problems of clock skew and multiple clock domains and in parallel with this is coming to grips with Intellectual Property IP based design flows which emphasise the need for a flexible interconnect strategy In this book John Bainbridge investigates the design of an asynchronous on chip interconnect looking at all the stages of the design from the choice of wiring layout through asynchronous signalling protocols to the higher level problems involved in supporting split transactions The MARBLE bus the first asynchronous SoC bus used in a commercial demonstrator chip containing a mixture of asynchronous and synchronous macrocells is used as a concrete example throughout the book

Advanced Topics In Microelectronics And System Design Giuseppe Ferla, Luigi Fortuna, Antonio Imbruglia, 2000-12-13 This volume covers a wide area from research topics to the design and improvement of integrated circuit devices already existing or to be introduced to the market **Unified low-power design flow for data-dominated multi-media and telecom applications** Francky Catthoor, 2013-03-14 This book is the first in a series on novel low power design architectures methods and design practices It results from of a large European project started in 1997 whose goal is

to promote the further development and the faster and wider industrial use of advanced design methods for reducing the power consumption of electronic systems Low power design became crucial with the wide spread of portable information and communication terminals where a small battery has to last for a long period High performance electronics in addition suffers from a permanent increase of the dissipated power per square millimetre of silicon due to the increasing clock rates which causes cooling and reliability problems or otherwise limits the performance The European Union's Information Technologies Programme Esprit did therefore launch a Pilot action for Low Power Design which eventually grew to 19 R D projects and one coordination project with an overall budget of 14 million Euro It is meanwhile known as European Low Power Initiative for Electronic System Design ESD LPD and will be completed by the end of 2001 It involves 30 major European companies and 20 well known institutes The R D projects aims to develop or demonstrate new design methods for power reduction while the coordination project takes care that the methods experiences and results are properly documented and published
