Modern Methods of Speech Processing Ravi P. Ramachandran, Richard Mammone, 2012-12-06 The term speech
processing refers to the scientific discipline concerned with the analysis and processing of speech signals for getting the best
benefit in various practical scenarios These different practical scenarios correspond to a large variety of applications of
speech processing research Examples of some applications include enhancement coding synthesis recognition and speaker
recognition A very rapid growth particularly during the past ten years has resulted due to the efforts of many leading
scientists The ideal aim is to develop algorithms for a certain task that maximize performance are computationally feasible
and are robust to a wide class of conditions The purpose of this book is to provide a cohesive collection of articles that
describe recent advances in various branches of speech processing The main focus is in describing specific research
directions through a detailed analysis and review of both the theoretical and practical settings The intended audience
includes graduate students who are embarking on speech research as well as the experienced researcher already working in
the field For graduate students taking a course this book serves as a supplement to the course material As the student

focuses on a particular topic the corresponding set of articles in this book will serve as an initiation through exposure to research issues and by providing an extensive reference list to commence a literature survey Experienced researchers can utilize this book as a reference guide and can expand their horizons in this rather broad area *Speech and Speaker Recognition* Manfred Robert Schroeder, 1985-01-01
