Spacetime, Geometry and Gravitation Pankaj Sharan, 2009-11-18 This is an introductory book on the general theory of relativity based partly on lectures given to students of M Sc Physics at my university The book is divided into three parts The first part is a preliminary course on general relativity with minimum preparation The second part builds the mathematical background and the third part deals with topics where mathematics developed in the second part is needed The first chapter gives a general background and introduction This is followed by an introduction to curvature through Gauss Theorema Egregium This theorem expresses the curvature of a two dimensional surface in terms of intrinsic quantities related to the intrinsic distance function on the surface The student is introduced to the metric tensor Christoffel symbols and Riemann curvature tensor by elementary methods in the familiar and visualizable case of two dimensions This early introduction to geometric quantities equips a student to learn simpler topics in general relativity like the Newtonian limit red shift the Schwarzschild solution precession of the perihelion and bending of light in a gravitational field Part II chapters 5 to 10 is an introduction to Riemannian geometry as required by general relativity This is done from the beginning starting with vectors and tensors I believe that students of physics grasp physical concepts better if they are not shaky about the mathematics involved

L. Redfield, Valerie J. Shute, 2003-06-29 The first International Conference on Intelligent Tutoring Systems ITS was held ten years ago in Montreal ITS 88 It was so well received by the international community that the organizers decided to do it again in Montreal four years later in 1992 and then again in 1996 ITS 98 differs from the previous ones in that this is the first time the conference has been held outside of Montreal and it's only been two years not four since the last one One interesting aspect of the ITS conferences is that they are not explicitly bound to some organization e.g. IEEE or AACE Rather the founder of these conferences Claude Frasson started them as a means to congregate researchers actively involved in the ITS field and provide a forum for presentation and debate of the most currently challenging issues Thus the unifying theme is science This year's hot topics differ from those in the earlier ITS conferences as they reflect ever changing trends in ITS research A few of the issues being examined at ITS 98 include Web based tutoring systems deploying ITS in the real world tutoring and authoring tools architectures and knowledge structure and representation El-Hi Textbooks in Print, 1984
