Using the Engineering Literature Bonnie A. Osif,2016-04-19 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links

Guide to Information Sources in Engineering Charles Lord,2000-08-15 The only source that focuses exclusively on engineering and technology this important guide maps the dynamic and changing field of information sources published for engineers in recent years Lord highlights basic perspectives access tools and English language resources directories encyclopedias yearbooks dictionaries databases indexes libraries buyer s guides Internet resources and more Substantial emphasis is placed on digital resources The author also discusses how engineers and scientists use information the culture and generation of scientific information different types of engineering information and the tools and resources you need to locate and access that material Other sections describe regulations standards and specifications government resources professional and trade associations and education and career resources Engineers scientists librarians and other information professionals working with engineering and technology information will welcome this research

Earthquake Hazard Assessment Sreevalsa Kolathayar,T.G. Sitharam,2018-05-30 This book represents a significant contribution to the area of earthquake data processing and to the development of region specific magnitude correlations to create an up to date homogeneous earthquake catalogue that is uniform in magnitude scale The book discusses seismicity

analysis and estimation of seismicity parameters of a region at both finer and broader levels using different methodologies. The delineation and characterization of regional seismic source zones which requires reasonable observation and engineering judgement is another subject covered. Considering the complex seismotectonic composition of a region, use of numerous methodologies DSHA and PSHA in analyzing the seismic hazard using appropriate instruments such as the logic tree will be elaborated to explicitly account for epistemic uncertainties considering alternative models for Source model Mmax estimation and Ground motion prediction equations to estimate the PGA value at bedrock level. Further VS30 characterization based on the topographic gradient to facilitate the development of surface level PGA maps using appropriate amplification factors is discussed. Evaluation of probabilistic liquefaction potential is also explained in the book. Necessary backgrounds and contexts of the aforementioned topics are elaborated through a case study specific to India which features spatiotemporally varied and complex tectonics. The methodology and outcomes presented in this book will be beneficial to practising engineers and researchers working in the fields of seismology and geotechnical engineering in particular and to society in general.

Geotechnical Hazards Z. Lisac, B. Maric, A. Szavits-Nossan, 2020-12-17. The contributions to this volume examine geotechnical hazard acknowledging the diversity of local ground conditions and environmental factors which play a decisive role in designing engineering structures in Danubian countries.
