

Introduction - Definitions

- A **chromatogram** is a series of detector responses, sampled uniformly across a length of time. The elution of a compound results in a characteristic chromatographic peak profile.
- **Peak**: The peak is the portion of the chromatographic recording of the detector response when a single component is eluted from the column. If separation is incomplete, two or more components may be eluted as one unresolved peak.
- **Integration** is the process of calculating an area that is bounded in part or in whole by a curved line. The goal of chromatographic peak integration is to obtain retention times, heights, and areas of these peaks.
