**Protein Engineering For Industrial Biotechnology** Lilia Alberghina, 2003-09-02 Protein engineering has proved to be one of the more fruitful technological approaches in biotechnology being both very powerful and able to generate valuable intellectual property This book aims to present examples in which the application of protein engineering has successfully solved problems arising in industrial biotechnology There is a section on its use to enhance purification of recombinant proteins The use of protein engineering to modify the activity or the stability of industrial enzymes from lipases

to proteases from carboxypeptidases to glucanases and glucosidases and from pectin modifying enzymes to enzymes able to degrade recalcitrant compounds is extensively covered. It is shown how areas as diverse as agrofood technology, fine chemistry, detergents, bioremediation and biosensors receive significant contributions from protein and solvent engineering. The application of protein engineering to health care is also covered, from the development of new vaccines to new potential therapeutic proteins. A specific notation is given to protein engineering in the development of target molecules for drug discovery. International in scope, the many contributions are drawn from academia and industry. The text should be of interest to students and researchers in industrial biotechnology as well as to everybody interested in basic research in protein structure, molecular genetics, bio organic chemistry, biochemistry, agrobiotechnology, pharmaceutical sciences and medicine.

Identification of immune-related biomarkers for cancer diagnosis based on multi-omics data Liang Cheng, Xin

Zhang, Chuan-Xing Li, Rui Guo, 2023-02-02      *Molecular Diversity and PCR-detection of Toxigenic Fusarium Species and Ochratoxigenic Fungi* G. Mulè, John A. Bailey, B.M. Cooke, A. Logrieco, 2012-09-19 Toxigenic *Fusarium* species and ochratoxigenic fungi are responsible for various plant diseases which have important consequential effects on both human and animal health worldwide. The development of rapid, robust and sensitive detection methods based on new molecular technologies is urgently needed in order to identify fungal contamination in the field and quantify toxin accumulation in food and animal feed. Most of the contributions in this special issue are from results obtained through the EU 5th Framework project QLKI CT 1998 01380 DETOX FUNGI: early detection of toxigenic *Fusarium* species and ochratoxigenic fungi in plant products which has strongly stimulated interaction and co operation between many European scientists. Valuable contributions from other scientists have guaranteed a complete overview of this stimulating and interesting topic. This is the third special issue published in the European Journal of Plant Pathology concerning mycotoxigenic fungi under the aegis of COST Action 835 Agriculturally Important Toxigenic Fungi. The first two dealt with Mycotoxins in Plant Disease Vol 108 7 2002 and Epidemiology of Mycotoxin Producing Fungi Vol 109 7 2003. The present issue contains contributions which cover aspects of molecular diversity, phylogeny and PCR detection of toxigenic *Fusarium* species and various ochratoxigenic fungi. We hope these will prove helpful to researchers involved in similar work and will stimulate the future studies required for the early detection of these fungi which is so essential for overcoming the health risks associated with mycotoxin contaminated food products.      **Applied Genomics of Foodborne Pathogens** Xiangyu Deng, Henk C. den Bakker, Rene S.

Hendriksen, 2017-01-23 This book provides a timely and thorough snapshot into the emerging and fast evolving area of applied genomics of foodborne pathogens. Driven by the drastic advance of whole genome shotgun sequencing (WGS) technologies, genomics applications are becoming increasingly valuable and even essential in studying, surveying and controlling foodborne microbial pathogens. The vast opportunities brought by this trend are often at odds with the lack of bioinformatics know how among food safety and public health professionals since such expertise is not part of a typical food

microbiology curriculum and skill set Further complicating the challenge is the large and ever evolving body of bioinformatics tools that can obfuscate newcomers to this area Although reviews tutorials and books are not in short supply in the fields of bioinformatics and genomics until now there has not been a comprehensive and customized source of information designed for and accessible to microbiologists interested in applying cutting edge genomics in food safety and public health research This book fills this void with a well selected collection of topics case studies and bioinformatics tools contributed by experts at the forefront of foodborne pathogen genomics research      **Koneman's Color Atlas and**
