ROSint - Integration of a mobile robot in ROS architecture André Gonçalves Araújo, 2012-07-01 The goal of this work is to provide hardware abstraction and intuitive operation modes to decrease the development and implementation time of robotic platforms thus allowing researchers to focus in their main scientific research motivations e.g. search and rescue multi robot surveillance swarm robotics among others. To that end this work presents the development of a compact mobile low cost robotic platform denoted as TraxBot developed and assembled at the Institute of Systems and Robotics ISR which has been fully integrated in the well known Robot Operating System ROS framework. Furthermore several available mobile robots are compared and discussed in terms of their physical dimensions hardware sensors communication abilities motion maximum run time and special features. This provides support to the reader on the decision making acquisition process of a cost effective robotic platform. Beyond the survey's results the robotic system assembly with a full description of its components as well as detailed information about the microcontroller programming development and testing are also presented. The potentialities of the TraxBot are described which combined with the herein presented ROS driver provide several tools for data analysis and easiness of interaction between multiple robots sensors and teleoperation devices. In order to validate the approach several experimental tests were conducted using both real and mixed teams of real and virtual robots

Human-Computer Interaction - INTERACT 2009 Tom Gross, Jan Gulliksen, Paula Kotzé, Lars Oestreicher, Philippe Palanque, Raquel Oliveira Prates, Marco Winckler, 2009-08-06 INTERACT 2009 was the 12th of a series of INTERACT international conferences supported by the IFIP Technical Committee 13 on Human Computer Interaction This year INTERACT was held in Uppsala Sweden organized by the Swedish Interdisciplinary Interest Group for Human Computer Interaction STIMDI in cooperation with the Department of Information Technology at Uppsala University Like its predecessors INTERACT 2009 highlighted both to the academic and to the industrial world the importance of the human computer interaction HCI area and its most recent breakthroughs on current applications Both experienced HCI researchers and professionals as well as newcomers to the HCI field interested in designing or evaluating interactive software developing new interaction technologies or investigating overarching theories of HCI found in INTERACT 2009 a great forum for communication with people of similar interests to encourage collaboration and to learn INTERACT 2009 had Research and Practice as its special theme The reason we selected this theme is that the research within the field has drifted away from the

practical applicability of its results and that the HCI practice has come to disregard the knowledge and development within the academic community
