

ENGINE - INTEK THEORY OF OPERATION

Air Intake System Operation

Function:

Provides clean filtered air for carburetion.

Major Components:

Filter element, cover, mounting base.

How the System Works:

Air enters the air filter from the opening in the cover and is filtered with a replaceable paper element. Clean air is drawn into the carburetor and the engine for combustion.

Governor Operation

MG1121

- A - Governor Arm
- B - Throttle Control Spring
- C - Throttle Control Lever
- D - Throttle Shaft
- E - Linkage
- F - Governor Lever

Function:

Limits the maximum speed of the engine to a specified limit, and maintains a "set" engine speed.

Major Components:

Camshaft gear, governor gear, flyweights, plunger, governor arm, lever, spring, and linkage.

How the System Works:

Throttle valve position (and engine speed) is controlled by the engine governor. The governor lever (F) is being acted on by two forces, in opposite directions: in one direction the pull of the throttle control lever (C) and cable, in the other direction the centrifugal force of the governor flyweights

inside the engine. The governor flyweights will always override the pull of the throttle control spring (B) once the engine reaches maximum governed speed.

The governor gear and flyweights are located inside the crankcase and driven by the camshaft gear. As engine speed is increased, the flyweights are pushed outward by centrifugal force. As the flyweights move outward they push on the plunger, which contacts the governor arm (A). The governor arm passes through the crankcase housing, and has the governor lever mounted on it's end. The governor lever is connected by a link (E) to the throttle shaft (D), and will pull the throttle valve closed when the engine reaches maximum governed speed.

When operating the engine under varying loads with a fixed throttle control lever position, the governor has the effect of maintaining a constant engine speed as the load increases. This is because as the engine speed decreases because of the load, the governor flyweights move in, and the governor linkage allows the throttle valve to open, speeding up the engine. This will occur until the engine reaches maximum load, at which time the throttle is wide open.
