**What can we make of theories of embodiment and the role of the human mirror neuron system?** Analía Arevalo, Juliana Baldo, Fernando González-Perilli, Agustín Ibanez, 2016-03-09 In recent years work surrounding theories of embodiment and the role of the putative mirror neuron system MNS in humans has gained considerable attention. If humans have developed a network of neurons that fire in response to other beings' actions as has been shown in macaques, this system could have vast implications for all kinds of cognitive processes unique to humans such as language learning, empathy, and communication in general. The goal of tapping into and understanding such a system is a fascinating yet challenging one. One form of embodiment, embodied linguistics, suggests that the way we process linguistic information is linked to our physical experience of the concept conveyed by each word. The interaction between these cognitive systems, i.e. language and motor processing, may occur thanks to the firing of neurons making up the MNS. The possible interdependence between different cognitive systems has implications for healthy as well as pathological profiles, and in fact work in recent years has also explored the role of embodiment and/or the MNS in clinical populations such as stroke, Parkinson's Disease, Alzheimer's Disease, and Autism, among others. Research on embodiment and/or the MNS has been approached with a number of different methodologies, but the results obtained with these different methodologies have not been entirely consistent, generating doubts regarding the theories. The question has been raised as to what this line of inquiry can gain from the types of evidence contributed by functional neuroimaging methods carried out with healthy volunteers versus behavioral or lesion/symptom mapping methods employed with neurologically compromised individuals. Of particular interest are the clinical applications of this line of research. If indeed a system exists which reflects a tight link between, for example, the human language and motor systems, then the obvious challenge is to tap into this system to create useful therapies that can provide rehabilitation where damage has occurred. This Research Topic brought together work conducted with healthy and patient populations using several behavioral and imaging techniques, as well as insightful commentaries and opinion pieces. We believe the combined work of the participating authors is an important contribution to this intriguing line of research and an excellent point of reference for future work.

Structural Inequality Victoria Kaplan, 2006 Architecture is a challenging profession. The education is rigorous and the licensing process lengthy; the industry is volatile and compensation lags behind other professions. All architects make a huge investment to be able to practice, but additional obstacles are placed in the way of women and people of color. Structural Inequality relates this disparity through the stories of twenty black architects from around the United States and examines the sociological context of architectural practice. Through these experiences, research, and observation, Victoria Kaplan explores the role systemic racism plays in an occupation commonly referred to as the white gentlemen's profession. Given the shifting demographics of the United States, Kaplan demonstrates that it is incumbent on the profession

to act now to create a multicultural field of practitioners who mirror the changing client base Structural Inequality provides the context to inform and facilitate the necessary conversation on increasing diversity in architecture Alignment Robert S. Kaplan, David P. Norton, 2006-02-23 Most organizations consist of multiple business and support units each populated by highly trained experienced executives But often the efforts of individual units are not coordinated resulting in conflicts lost opportunities and diminished performance Robert S Kaplan and David P Norton argue that the responsibility for this critical alignment lies with corporate headquarters In this book the authors apply their revolutionary Balanced Scorecard management system to corporate level strategy revealing how highly successful enterprises achieve powerful synergies by explicitly defining corporate headquarters role in setting coordinating and overseeing organizational strategy Based on extensive field research in organizations worldwide Alignment shows how companies can build an enterprise level Strategy Map and Balanced Scorecard that clearly articulate the enterprise value proposition how the enterprise creates value above that achieved by individual business units operating alone The book provides case studies actionable frameworks and sample scorecards that show how to align business and support units boards of directors and external partners with the corporate strategy and create a governance process that will ensure that alignment is sustained The next breakthrough in strategy execution from the field s premier thinkers Alignment shows how today s companies can unlock unrealized value from enterprise synergies **Area Business Databank** ,1984 The Army-Navy-Air Force Register ,1954 Bibliography of Agriculture with Subject Index ,1988-10 *Books and Pamphlets, Including Serials and Contributions to Periodicals* Library of Congress.
