Adopting APA format in the university/college academic reporting of statistics and narrative is common. However, not many students (including some lecturers) are conversant with the APA format. Here is a review of some APA formatting for the most prevalent statistical analyses.

Kindly pay attention to issues of italic, spacing, and punctuation. APA style is very precise about these.

DESCRIPTIVE ANALYSIS

Quantitative data is often reported using means and standard deviations, and percentages which can be presented in Text, Tables or Figures. Note that data which is presented using table or figure is to be **interpreted NOT reported** in texts. In other words, if a table or a figure is used, the data already in table or figure is not reported or repeated in the text. It is either a text, a table, or a figure is used.

Reporting Mean and Standard Deviation

The mean (average) of a data set is the result of the addition of all numbers in the data set, divided by the number of values in the set. Standard deviation is a statistic which measures the dispersion of a dataset relative to its mean.

These are usually presented in the main text and/or in parentheses.

Examples:

- The average weight of the participants was 175.4 lb. ($SD = 12.25$)
- The average weight of the participant was moderate ($M = 175.4$, $SD = 12.25$).
- Weight significantly varied between the participants aged 18 - 25, 26-30, and 31-35. The means were 165.30, 176.20, and 177.10 lb., respectively.

In a 5-point **Likert Scale** – although the data obtained through Likert Scale is a qualitative data, it can be transformed into a quantitative data set to obtain the mean and standard deviation of the responses. The mean can be understood thus

Scale	Description	Mean Weight	Level
1	Strongly Disagree	1.00 – 1.79	Very Low
2	Disagree	1.80 – 2.59	Low
3	Somewhat Agree	2.60 – 3.39	Moderate
4	Agree	3.40 – 4.19	High
5	Strongly Agree	4.20 – 5.00	Very High
