

## Bird Beak Lab

### Background Information

The adaptation is a trait that helps an organism survive and reproduce. Beak shape and size is an example of an adaptation. As this lab goes, you will see how certain adaptations can determine the bird's behavior of acquiring food. You will see animals such as clippers, foragers, raptors, etc., and you will see examples of types of bird food. You will then see animals be picked up based on represented by morphology (form), function (shape), structure (parts) and behavior (action). The shape represents the bird's anatomy.

### Beak Size

Which bird type is best adapted or suited to obtain certain food?

BIRD - BEAKS

### Questions

- Which bird/beak is best suited for eating insects? \_\_\_\_\_
- Which bird/beak is best suited for eating bugs? \_\_\_\_\_
- Which bird/beak is best suited for eating fruit? \_\_\_\_\_
- Which bird/beak is best suited for eating seeds? \_\_\_\_\_

### Observations

Change	Form
Storage	Structure
Physiology	Shape
Species	Coloration
Morphology	How large
Behavior	

### Procedure

1. Choose a bird type from the top page in your group. Use the key to represent the bird's anatomy. Use the animal appropriately.
2. When the signal is given, you will have 30 seconds to try to put as much food as possible into the bird's stomach. **STOP! CATCHING!** (Do not release any of the birds. Do not let them fly out of the enclosure or the enclosure.)
3. Count and record the amount of food in the table 1 for the bird type.
4. Calculate group averages.

### Conclusions

1. What did variations in bird/beak type affect survival of the birds? \_\_\_\_\_
2. How is this lab an example of evolution by natural selection? \_\_\_\_\_

## **Identifying Adaptations In Birds Lab Key:**

**Physiological Adaptations for Breeding in Birds** Tony D. Williams, 2012-08-05 Physiological Adaptations for Breeding in Birds is the most current and comprehensive account of research on avian reproduction. It develops two unique themes: the consideration of female avian reproductive physiology and ecology and an emphasis on individual variation in life history traits. Tony Williams investigates the physiological, metabolic, energetic, and hormonal mechanisms that underpin individual variation in the key female-specific reproductive traits and the trade-offs between these traits that determine variation in fitness. The core of the book deals with the avian reproductive cycle from seasonal gonadal development through egg laying and incubation to chick rearing. Reproduction is considered in the context of the annual cycle and through an individual's entire life history. The book focuses on timing of breeding, clutch size, egg size, and egg quality, and parental care. It also provides a primer on female reproductive physiology and considers trade-offs and carryover effects between reproduction and other life history stages. In each chapter, Williams describes individual variation in the trait of interest and the evolutionary context for trait variation. He argues that there is only a rudimentary and in some cases nonexistent understanding of the physiological mechanisms that underpin individual variation in the major reproductive life history traits and that research efforts should refocus on these key unresolved problems by incorporating detailed physiological studies into existing long-term population studies, generating a new synthesis of physiology, ecology, and evolutionary biology.

**Characterizing Human Psychological Adaptations** Gregory R. Bock, Gail Cardew, 2008-04-30 This book contains chapters by some of the leading figures in the field of evolutionary psychology. The latest data are presented on evolutionary theories in perception, information, various aspects of social behaviour, language, learning, and aggression. A common theme running through the printed discussions in this book is the important problem of how we can develop and test rigorous characterizations of evolved mental adaptations.

*Introductory Biology Laboratory Manual* Gbg, 1994-09-26 **Prentice Hall Science Explorer: Teacher's ed**, 2005 **Highly Mutable Animal RNA Viruses: Adaptation and Evolution** Akio Adachi, Masako Nomaguchi, 2017-11-30 Viruses are widely present in nature and numerous viral species with a variety of unique characteristics have been identified so far. Even now, new emerging or re-emerging viruses are being found or re-found as novel viral classes or as quasi-species. Indeed, viruses are everywhere. Of note, viruses are pivotal as targets and tools of basic and applied sciences. On one hand, portions of the viruses are infectious for animals, including humans, and cause various

diseases in infected hosts by distinct mechanisms and at a different level of severity While many of viruses are known to co exist quietly with their hosts pathogenic viruses certainly affect and threaten our society as well as individuals to provoke serious medical or economic attention We should act against certain dreadful and highly infectious viruses as a global problem Animal RNA viruses can readily mutate to adapt themselves in their hostile environments for their survival Resultant viruses may sometimes show essentially altered phenotypes from the original parental strains This fundamental and general property of animal RNA viruses represents major extensive issues of scientific medical and or economic importance In this Research Topic we have focused on the high mutability of animal RNA viruses and selected relevant articles on animal viruses of broad ranges such as primate lentiviruses influenza viruses paramyxoviruses flaviviruses rabies virus norovirus picornaviruses and picobirnavirus Each article has taken up intriguing aspects of the subject viruses We are sure that readers acquire important information on virus mutation adaptation diversification and evolution and hope that researchers in the field related to virology gain some solid hints from the reported articles for further virological and or medical studies Finally we thank all the contributing researchers in this Research Topic entitled Highly Mutable Animal RNA Viruses Adaptation and Evolution for their elegant and interesting works

timely The emphasis throughout this advanced textbook is on the definition and description of migratory behaviour its ecological outcomes for individuals populations and communities and how these outcomes lead to natural selection acting on the behaviour to cause its evolution It takes a truly integrative approach showing how comparisons across a diversity of organisms and biological disciplines can illuminate migratory life cycles their evolution and the relation of migration to other movements Migration The Biology of Life on the Move focuses on migration as a behavioural phenomenon with important ecological consequences for organisms as diverse as aphids butterflies birds and whales It is suitable for senior undergraduate and graduate level students taking courses in behaviour spatial ecology movement ecology and conservation It will also be of interest and use to a broader audience of professional ecologists and behaviourists seeking an authoritative overview of this rapidly expanding field
