

# Human Body: Lymphatic System

The lymphatic system plays a vital role in the body's immunity. Lymphatic vessels transport lymph, a fluid containing infection-fighting white blood cells, from body tissues into lymph ducts that drain into lymph nodes.

**Tonsils** are in the back of the throat, on both sides. Tonsils aid in fighting off pathogens but sometimes become infected. A tonsillectomy can be performed to remove infected tonsils.

**Lymphocytes** are a type of white blood cell that produces antibodies for immunity.

The **thymus** is a lymphatic organ located between the lungs and acts as storage for lymphocytes.

## Lymph Nodes

**Lymph nodes** are small, oval-shaped nodes that occur in clusters throughout the body. They contain lymphocytes and help defend the body against infection.

**Superficial lymph nodes** are highly concentrated in the cervical (neck), axillary (arm pit), and inguinal (groin) regions. These are palpable and are often used as indicators of infection.
