Makarieva,V.V. Gorshkov,2000-06-14 It is not possible to understand the apparent stability of the Earth s climate and environment unless we can fully understand how the best possible environmental conditions may be maintained for life to exist Human colonization of areas with natural biota for industrial or agricultural activities will lead to degradation of those natural communities and violation of the BRE biotic regulation of the environment principle Thus to maintain an environment on Earth that is suitable for life it is necessary to preserve and allow the natural recovery of natural biotic communities both in the oceans and on land

This book is devoted to a quantitative version of the BRE concept and is built on a foundation of modern scientific knowledge accumulated in the fields of physics and biology *The American Journal of Science* ,1959 Geological Quarterly ,2014

The American Biology Teacher ,2003 *The Geology of Stratigraphic Sequences* Andrew D. Miall,2010-06-09 It has been more than a decade since the appearance of the First Edition of this book Much progress has been made but some controversies remain The original ideas of Sloss and of Vail building on the early work of Blackwelder Grabau Ulrich Levorsen and others that the stratigraphic record could be subdivided into sequences and that these sequences store essential information about basin forming and subsidence processes remains as powerful an idea as when it was first formulated The definition and mapping of sequences has become a standard part of the basin analysis process The main purpose of this book remains the same as it was for the first edition that is to situate sequences within the broader context of geological processes and to answer the question why do sequences form Geoscientists might thereby be better equipped to extract the maximum information from the record of sequences in a given basin or region Tectonic climatic and other mechanisms are the generating mechanisms for sequences ranging over a wide range of times scales from hundreds of millions of years to the high frequency sequences formed by cyclic processes lasting a few tens of thousands of years
