A Study Guide for Success is a workbook and study guide designed to be used in conjunction with standard required texts in Environmental Studies courses. Used over the duration of a course, it enhances comprehension, increases retention, and improves test scores. The book contains tear-out pages that can easily be attached to class notes or other course materials. Chapters feature questions and fill-in-the-blank exercises allowing students to check their understanding of the subject matter and assess their progress early on. Everything in the book is designed to answer the question: What do I need to know? The fourteen chapters of the book cover the many areas involved in environmental studies, including chemical, physical, biological, and earth science principles, earth sphere and biomes. Also covered are environmental cycles, material and energy resources, pollution, and environmental laws and regulations. Each chapter begins with an explanation of the topic to be discussed and indicates where in a textbook students can find complete discussions, figures, charts, and tables. Chapter exercises are presented in multiple choice, fill-in-the-blank, and matching formats, allowing students many opportunities for self-evaluation prior to taking class examinations. Of special note is the Rap City in Green feature of the book, which reviews major concepts in verse form. The musicality of the verses enhances appeal and is a highly effective memory aid. Pathways to Learning: Environmental Science is an excellent support tool for students in general education Environmental Science courses. Alan Jacobs received his PhD from Indiana University, Bloomington. Currently, he is a Professor in the Department of Geological and Environmental Sciences at Youngstown State University in Youngstown, Ohio, where he has taught and conducted research in environmental studies, geology, and public health.

**Environmental Science** Richard Wright, Richard T. Wright, 2005. *Environmental Science: Toward a Sustainable Future* 9e focuses on the question: What will it take to move our civilization toward a long-term sustainable relationship with the natural world? Its goal is to engage and inform students so they can critically evaluate environmental issues and make informed decisions about their environment. Three main categories define how the author works to achieve this goal: Critical thinking, Applications, Resources for instructors and students.

Environmental Science Theory W.T. de Groot, 1992-10-22. Having no competitive works, this unique publication presents a single structure for the analysis, explanation, and solution of environmental problems regardless of their location, nature, or scale. In this problem-oriented approach, a coherent framework interconnects the study of facts and values, environmental systems, social causes, and ethical premises. Counterbalancing current biases, the author emphasizes the fundamental normative, economic, and social/scientific aspects of truly interdisciplinary environmental science. For instance, the normative side of environmental problems is often neglected, resulting in policy designs and evaluations containing inefficient mixtures of sophisticated models and poorly grounded normative premises. This is the first major study to enrich the field with more normative consistency and groundedness. It is also the first text to consistently identify the social causes of environmental problems rather than focusing on the physical/scientific aspects and thus design deeper and more effective policies. Furthermore, a tinge of post-modern thinking runs throughout the book, with special care being taken, however, to

constantly keep in view the practical relevance of theory for problem oriented work The book will be of interest to environmental scientists and managers wishing to improve the consistency and depth of their work to social scientists and geographers wishing to connect their discipline to the environmental problems field and to general scientists interested in the connections between philosophy and practice      **Pathways to Learning Environmental Science** Alan
